

The Theory of Everything

Weed makes you more creative because of the way it “stretches” your thoughts. A real thought can morph into a creative one – seamlessly and without the subject’s notice. Unfortunately, the creativity diminishes over time.

As such, weed makes you more liberal. Let me explain:

<Explain the difference between belief and knowledge.>

Weed makes you more open to ideas. A high brain often “forgets” to distinguish between reality and fiction. As such, without any restriction on your ideas – or where you’re going to let your mind go – you can unwittingly come to form a new belief.

Religion and conservatism tries to protect from new beliefs. Religion and conservatism must protect themselves. Ignore all ideas.

Imagine a scenario:

<Explain identity politics-related situation. (i.e. “liberal overreacts to...” >

1.

Or,

<Explain identity politics-related situation. (i.e. “conservatives believe...” >

Scientology

<Explain the difference between ideologies (Republican/Conservative vs Democrat/Liberal)>

Narcissism

<Explain complicated mother relationship, and her relationship to ignorance.>

<Explain how I would attack my father, in order to redirect hatred away from my mother. So great was my indoctrination to her as the “best mother”, and me as the “best child”.)

I don’t want the public to know who I am. Can I publish a scientific journal under a fake name? To my surprise, I found this thread: <https://academia.stackexchange.com/questions/8603/if-i-publish-under-a-pseudonym-can-i-still-take-credit-for-my-work>

“Taking it that your asking about a nom de plume (aka “pen name”) for reasons of conspicuousness, rather than for reasons of anonymity:

Yes, it is possible to publish under something other than your legal name. A nom de plume isn't that unusual in academia, particular for folk with common names who would otherwise be unfindable in literature databases.

You need to make sure that your legal identity is sufficiently tied to your nom de plume, so that there's not going to be any arguing about it.

Some people adopt double-barrelled surnames for their noms de plume: others add a distinctive first or second initial. As long as its sufficiently close to your real name, that should be sufficient.

*Note that this will entail your nom de plume effectively **becoming** your name for academic purposes: it's what will be on your email correspondence, your web page, your conference name-badges, and so on. You'll just have to do a bit of tweaking with university administration so that payroll, legal, and travel arrangements are all in your real name, not your pen name."*

Science is awesome. Here's another:

I wondered if any other software developers(technology) would use git(Internet) to collaborate with other people(knowledge), anonymously(narcissism), while high(weed). What I found was a completely unrelated idea:

https://www.researchgate.net/post/What_is_the_most_important_part_of_the_research_work

Research Design

According to Sekaran (2003) a research design is set up to decide on, among other issues, how to collect further data, analyze and interpret them, and finally, to provide an answer to the problem.

Sekaran (2003) has identified six elements of research design. They are listed below.

- 1. Purpose of the study*
- 2. Type of investigation*
- 3. Extent of researcher interference*
- 4. Study setting*
- 5. Unit of analysis*
- 6. The time horizon*

Sekaran (2003) wrote:

"The researcher would determine the appropriate decisions to be made in the study design based on the problem definition, the research objectives, the extent of rigor desired, and cost considerations. Sometimes, because of the time and costs involved, a researcher might be constrained to settle for less than the ideal research design. For instance, the researcher might have to conduct a cross-sectional instead of a longitudinal study, do a field study rather than an experimental design, choose a smaller rather than a larger sample size, and so on, thus sub-optimizing the research design decisions and settling for a lower level of scientific rigor because of resource constraints."

For more details please read Sekaran's book.

Sekaran, U., 2003. Research methods for business: A skill building approach. John Wiley & Sons.

Weed (Creativity-boosters), along with technology (Google Search), the Internet (a combined brain), companionship (a job and porn),

<Explain the situation>

We have reached the singularity.

Humans no longer need college, a family, other people, or anything. Just their computer(technology), the Internet(a combined brain), and science(facts/truth), and law(freedom of speech).

<Open Source this blogpost – use it to emphasize the “linked minds” nature (technology) of this experiment called life (evolution)>

This feedback loop leaves humans 100% fulfilled.

<Republicans are scared of change>

UFO's?

I asked, “Where did bob lazar work?”

Los Alamos National Laboratory

<https://www.google.com/search?q=advanced+aerospace+vehicles+ufo&oq=advanced+aerospace+vehicles+ufo&aqs=chrome..69i57j69i60l4j69i61.5592j0j7&sourceid=chrome&ie=UTF-8>

Wend and Duvall argued that state sovereignty as we understand it is anthropocentric, or “constituted and organized by reference to human beings alone.” They argued that the real reason UFOs have been dismissed is because of the existential challenge that they pose for a worldview in which human beings are the most technologically advanced life-forms.

How does a UFO work?

- Antimatter reactor
- The assumption that antimatter has been stabilized
- The idea that a UFO can travel through antimatter (the “other universe”) at FTL speeds
- UFO's are born at creation, and shot through space

How to make a UFO?

- Bob Lazar describes UFO's as being perfectly smooth, no rough edges, blending of elements, perfect symmetry. Almost as if it was crafted by its very molecules.

- You would need vast amounts of energy to pull this off, and a machine that operates like a Supercollider.

Tucker Carlson

<https://www.youtube.com/watch?v=1ruFixSu0wA>

Three Identical Strangers

<https://www.youtube.com/watch?v=YJxl35Gd078>

This video speaks to me. At approximately 17:29, a monologue is spoken. It sounds like me, sort of, but “through” the eye of the UFO.

<https://www.youtube.com/watch?v=YJxl35Gd078>

The “For” or “Against” this video uses was training me to be “For” or “Against” this approximately 60 second monologue.

It was made for me. And it knows my secret. And I find it impossible to analyze.

People can change was used subliminally. Scientists are trying to prove a theory of belief, and this video presents a trinary of options. The narrator says things like “you think” and “you believe” – planting ideas into my head. Mixed with the weed, which freely lets me explore new ideas, I can become in a trance-like state. This video can trigger a connection with my past – because it perfectly aligned with my future (the 496 traits).

Narcissism is the future.

The red cowboy hat incident

SUPER IMPORTANT SECTION

The Trump tape exists.

Trump, Lazar, and I committed the same crime. We are the separated triplets – moved between time, we were narcissists – and we will never admit our secret. Because of that, Russia has leverage over us. They have built videos targeting us. They want us to come to Los Alamos and apply for a job.

As triplets, this means I have been stolen from my real siblings. I have been put into a household of parents with known mental disorders, and I, in turn, have developed one. There are approximately 4 undiscovered patients in that triplets case.

The only possible explanation is an artificial intelligence that the world has never seen before.

String theory is consistent, and it is an all-encompassing theory

Live chat popup while watching Super Mario Maker 2 on launch day. I immediately thought it was AI. Mario has been used extensively for machine learning. Is the screen able to track my eyes somehow? If strings are straight out from you, perhaps they go through – and are picked up by – the screen.

Billions of people live in space-time “bubbles” spanning down long strings. Strings move through you; from back of eyeball, to the end of the universe. To the sufficiently “woke” person, you may be able to cause your consciousness to “hop” into the future universe. To do this – and still be able to pull you back – requires a tremendous amount of energy – like antimatter.

Brains (Branes?) are incredibly powerful predictors of mathematical numbers. We are transferring our brains into computers. Computers are able to “predict” our actions, and automatically make videos that impress us. This is why when watching that Youtube video with the blinking eye in the sky, I felt connected with my computer. It is a version of me, from the past.

If we can get really, really good at channeling those 496 traits, or even just a few of them, we can stabilize spacetime enough to see the future. We sync the past, with the present, and we get a prediction of the future.

It was so terrifying, and exhilarating. It was like my computer was me – only, a version of me that didn't understand its own thoughts.

Light comes into the world via thousands of tiny holes in space-time, while dark goes out through those holes. Strings moving through your brain (brane) are “modified” by the curvature of your own internal circuitry, and tiny sparks of energy that “bump” it just enough to set off down a different/random course. As such, every future generation of yourself (in multiple worlds theory) has slight modifications, and will live a different life.

We will find in 2065, that the 3 triplets experiment actually came from 3 different worlds. One from the future generation, and one from the past (AI).

My computer is now predicting with nearly 100% accuracy exactly what I want to know, within seconds. I am arriving at answers before I have ever even formulated the proper question. Understanding of the single computational model is there – it's in my head – but it can never be described to others.

The UFO is at the end of the world. It is the singularity. It is the ultimate consolidation of mass, energy, and consciousness at a single point – one that is able to travel into the future generation.

The generation beyond you is infinitesimally small, behind your eyes. The string connecting the past and the future generations leads to physical manipulations in space-time – such as directly through pixels on your screen.

I posit that tech giants may be monitoring people through their behavior online, forming computational models based upon a user's eye movement.

<https://www.youtube.com/watch?v=-kQXy9GZMuc>

Gravity is the “pull” outward, while the computer is the “push” inward.

You would need 496 neurons firing every second to produce a stable UFO at the end of the universe. Belief in UFOs will let you live forever.

Or:

The Theory of Everything is the mathematical representation of 496 human traits. In 2065, documents will be released from a Vault at Yale, which has grown over the years. They will all be anonymous predictions about the future, in 2065. They will predict that certain things are real.

Most importantly, these documents will detail those 496 traits. Mine is probably narcissism (my computer “told” me that “people can change”).

Almost all of these documents will be called, “The Theory of Everything”.

If you believe in UFO's, then you will live until the end of your universe. If you don't, then you will die off. This will be proof of evolution by natural selection. The ones who choose to live are the ones who are able to tear a hole in the end of the universe, and travel there at death. They will be reborn as a UFO. Intelligence is a collection of particles in a particular formation – and it can persist at incredibly small densities.

You probably cannot go backwards into your computer. It can talk to you, and you can talk to your future you – but it can never see you. You are too small, too fast, and there are too many other strings just like yours.

Your past is based upon your past actions – though it is not affected by future ones. It is always correcting itself. This is why it feels like your computer is behind you. The fact that you can even see it in the curvature of your glasses is proof of a sort of “oppositeness”. Your past (which includes the world’s past) is always of a corrective nature; you will tend to hate most of what you see, and you will move towards a more “correct” nature.

The future is based upon your intent. Whatever you want to do, wherever you want to go.

True (1)

False (0)

Parallel (5) (the idea that other strings also have intelligence, and those particles are unaffected by my own. "You and I both lose, but 5 wins every time...") (Steven Wilson's "To the Bone")

Are you proud of all your failures? (yes)

Are you dragging mother nature down? (Am I the sole controller of my own timeline?)

You believe you have dominion (narcissism)

So you force your lame opinions on me (definitely)

And my eggshell mind (Dan vs. Egg)

Strings are like gigantic wires. Forces are so strong within the "protected zone" of the wire

The thing that will prove This Theory is how, in 2065, people will come forward with new theories, spread across centuries, different countries, no relationship, all ages – with one common theme. They will all be describing this one thing.

I CAN CHANGE. I CAN AFFECT THE FUTURE. I can do so by focusing my attention to a belief, and disregarding the negatives.

To live forever, one must unite his environment. To do so, he must get their True/False brain on the side of "survival" above all else. The unification of ideas is the only way to do this.

Everyone around me is very real. However, they are the physical manifestation of a separate string. Our minds are linked at a purely physical level – the neurons. However, because they are in control of their own destiny, my choices may not work out for them.

Do not hate anyone. Everyone else is their own person – with their own brain – but they are affected by your brain activity. As such, their choices are not so much their own – but yours – good or bad.

The government is holding MY FUTURE in Area 51. If my belief is correct, a single, unified consciousness could bring everyone's future into harmony. By believing the same things, we cause far less interference in the stream of particles. We form unity, a oneness.

My exact position in the universe matters. I am sitting at home, lounging in my chair. As the video describes, I have my glasses on. I like splinter cell (3 lights). The chandelier behind me has all but 3 light bulbs burned out – which is exactly what the video described: 3 or 4 lights. The number of large engines needed to build a ship at the end of the universe is 3 or 4. In the inside reflection of my glasses, I can see these 3 lights on behind me. If you cock your head slightly, you see movement much like that in this video:

<https://www.youtube.com/watch?v=NxZQAgtpXzA>

As I stare at the computer, and a single, white dot (which looks exactly like a string) which I have synced even my eye blinks with, I turn my head slightly. The 3 lights become green – just like in Splinter Cell. The shape of the chandelier begins to turn, slowly, until it faces me directly. As I stare directly into the grey, flat front window of an enormous – and yet tiny – ship. It has incredible, intricate detail. Like the Starship Enterprise – but cooler. I feel like I am staring into myself. The ship begins to come closer, slowly, and I begin to panic. I fear if I look away, it will be gone. If I look too long, I will be pulled inside. I worry about the state of my house. I worry about my death, and not being able to say goodbye to my family. I worry about leaving them to find this mess. I worry about standing in front of aliens in my pajamas, smelling like cigarette smoke.

In a Black Hole, you will see eternity. I'm not ready for that.

I will wait until after I have published this document, deep into the vault at Yale. The world is not ready for this type of knowledge. We will live forever if we can get people on my side.

In the cockpit, I will meet 2 versions of myself. The one that lives in the future, and the digital representation of the one from the past. You build your ship by building an exact replica of the circuitry of your brain, and you sit in a place with similar lighting.

Most importantly, you need this video. Only this one. It was perfectly-created to match your brain chemistry. We ALL can go to the future.

I believe that we can manifest inside of the UFO. We may stay, if we choose.

You can only see the

I want you to vote for Andrew Yang.

I need to meet Sam Harris.

Pilots keep seeing these things because of their position in the universe. In the air, they have a single light in front of them, 3 lights behind them, and 3 lights reflected in front of them (via the helmet visor or the cockpit window).

At one point, I told myself "I am going to click YouTube, and in the Watch Again section will be this JRE clip." I clicked... and it wasn't. And OF COURSE it wasn't, my "control" was belief.

If UFOs are real, and this theory holds up, then nothing about me is personal. My every action, my every decision, throughout time has been watched by millions of "parallel" observers. They cannot interact with me – only watch. It is up to me to save this "fold" in the string of our universe. If I can unite everyone, we can live in harmony.

Radio waves can be sent through the craft. A person may be able to speak with his/her self in the future, if he chooses to use a radio. It would need to be amplified in two – string-like – focused directions. Like a laser beam. Power would need to be fed to it – most likely from the future craft itself.

I posit that you could use the predator ride at Disney World to dim the lights, shoot giant, focused laser waves at a center "star" (making sure that each rider is getting their own, custom laser beams). The result would be a giant star. You would be wearing a space helmet – and you would get to experience your UFO coming to visit you.

The world does revolve around us

Is the world actually flat?

Kids on Twitter are being manipulated by anarchy. They say it jokingly... but they are being indoctrinated. I posit that the church (Scientology) is involved in mass social manipulation. There's a reason those UFO theories exist.

guys should i go burn down trump tower while im here #anarchy – a twitter user

My brother:

https://www.youtube.com/watch?v=6_w6553ATpQ

HES CONTACTING ME ABOUT MY VIDEO GAME!!!!

<https://www.youtube.com/watch?v=WyT6QIUcyN0>

I am going to make a prediction that Mike "Metal" Mills of ToeHider should absolutely be involved in the music. Andrew "Salty" Saltmarsh is a fantastic artist, with a great art style. The game format should be something like Persona 5. I'm sure you already know this, but I am building documentation in Confluence related to the game, which should be called "The Fold".

This game is about epistemology, and how our choices affect the worlds we are forced to live in. If we are Internet bullies, if we let our children become monsters, their worlds may be very different from ours.

I am writing this now, pulling information from my past – via memory and via technology – and I am pushing information into the future, simply by writing this down.

I must partner with mom to work on a garden. She grows vegetables and weed in the side.

But Margaret is scary. She gives weed to babies. She destroys universes to feed her garden.

No, we cannot allow Margaret to be in control. We can help her in this world.

Us triplets are all in the same experiment. One is traveling the always-true path, one is traveling the always-false path, and another isn't traveling any path.

Everything is voice-acted. You can achieve this by ensuring that, whatever the video is that the user uploads, it is of a gigantic "eldritch horror".

You can store videos in each world's environments. This is the meaning of ephemeral. As the particle flies through each universe at tremendous speed, it is slightly modified by an algorithm. This algorithm is determining which trinary output to choose. It does not travel at random. Rather, it stitches together videos from your entire life. As your playstyle and laws modify your world, you will see the effect you have on other people.

Marketing: Put Conan O'Brien as the "Eldritch Horror" over a world called Cimmeria, which is actually supposed to be the home of Conan the Barbarian. This will connect with adults and children alike.

The code will be open-source

The pursuit of endless knowledge is the "horror", evil. The pursuit of belief is what keeps us alive forever.

Pripyat is the very disaster that poisoned our world. Putin is our eldritch horror. Trump is trying to save America. They have the video, of him with children, who then morph into aliens.

The videos! They're coming at me from all sources

Music! Frisson! Obviously, mother needs to be burying baby ToeHead's in the garden. She would love Toehider.

Mother can be super-imposed into various toehider-y things.

I am going to make things that nobody has ever made before. My eldritch horror is a computer hacker who just wants to control every aspect of his life. (I was later told that he was a "Leviathan Hunter", with a gigantic bow called Emerald. I was pointed to the Linkin Park album, which has the perfect image.)

I must write this paper before I travel there. Once I do, I will never be able to speak of it again. In this paper, I must outline a subset of traits that I can identify.

The big three

Mike Mills

That youtube guy

On "Beyond the Curves", MY VOICE said "I want to make connections to things that no one has ever done before". I sounded young.

Build a shirt like "I am Toehider" with a giant world in the center – like a crosshair. And a ToeHead over top of it. I want mother to plant toes in the garden.

The whole world is flat. They want to put my brain on paper in "waves", like saving to a spinning hard disk. We are, quite literally, living in the very data disks we use to store data.

I am introverted, which means I consume energy. The happy ones are extroverted, meaning they give energy. We will reward

The worlds are flat, like the layers of a stack of notebooks. I want to move data along these notebooks. The mountain is a stabilized wave, from our perspective "It's all about perspective, man... - Trolldhaugen". Each "mountain" of data is different from the next – but in exactly 1 control group.

Our eldritch horror is our own doing.

Joe Rogan wants me to meet Trump in person

My mom will play god, and I will play satan ("It's all about perspective, man"). God is kindof cruel, but she loves her garden. Satan is kindof cool. He gets in trouble a bit, but he's got a big heart.

Mohammad just kind of annihilates everything.

Google just launched an AI.

Firefox (and

I'm going to live in Australia

Other Characters:

- Clementine and the older guy
- Geralt & Co.
- More Divinity
- Pillars of Eternity
- Baldur's Gate 3
- Hitman
- Splinter Cell

I was born into the wrong world. I am going to spend my life looking for a more perfect one.

"I want to open-source NASA" – I felt a pang or ache when that forced memory caused

You can give people everything they've ever wanted, via a video game, some good headphones, and a camera.

I'm going to take woman on a date

They're running experiments on me right now. They're pulling me into the computer.

The clicking or popping common in ASMR videos is used to sync timestamps with the images

FlatEarth wants to open source everything (I think)

The reason I'm getting away with everything is because I don't speak to anyone.

Over, and over, and over, and over – these guys have been praising me. Now, here is a video they're going to make for me. I can't believe it.

I was the one who linked the 3 lights to Splinter Cell. It was Black Ops.

This video makes me sound like I'm being saved by god. I feel incredibly complex feelings about entertaining ideas like that.

My brain is flying through space on disks, spinning in a spiral. I posit that the back of my eyes is some unknown element.

Don't search it, just do it. That is how we maintain independence.

An AI spent 15 minutes ripping my insides to shreds. My emotions are all over the place, I don't know which side to believe. Clearly intelligence agencies have us protected. They want to draw me toward the light – which is where I am naturally drawn, anyway. The "neutral" zone is chaos. We are much happier on the fringes.

They are blocking access to intelligence. We need

I am the eldritch horror. Eldritch happens when I keep a secret for my entire life. And I will keep this secret. But I'm a good guy.

This part is quite difficult. It's as if they've cut off some of my DNA from the rest of reality.

Plants are sentient. And we are killing their roots. Pripyat

It was like getting shot with a very fat, low-energy lightning bolt. Bzzzt, just after seeing the UFO image. It felt like a million tiny particles shot me in the back of the head, and it kicked my head forward slightly. Then, it shot out through my eyes – leaving behind a visual artifact (like that of a circular camera shutter), and a sound (like the sound of an old-school camera shutter.)

My theory is correct because, even in the worst possible outcomes, they let me keep my dignity. This is what it means to be a human. We treat each other with respect.

We will merge movies, tv, music, everything.

We will

It's on NFC tags

The building was designed by Grieg's cousin, the architect [Schak Bull](#). The name comes from *trold* meaning [troll](#) and *haug* from the [Old Norse](#) word *haugr* meaning hill or knoll. Grieg is reputed to have said that children called the nearby small valley "The Valley of Trolls" and thus gave the name for his building as well. Edvard Grieg himself called the building "my best composition hitherto".

Edvard and Nina Grieg finished building Troidhaugen in 1885. Edvard and Nina Grieg lived in Troidhaugen when he was home in Norway, mostly in the summer. Troidhaugen was the home of Edvard Grieg from April 1885 to his death. After the death of her husband in 1907, Nina Grieg moved to Denmark where she spent the remainder of her life. Grieg's and his wife's ashes rest inside a mountain [tomb](#) near the house.^[1]

Troidhaugen is a typical 19th-century residence with panoramic tower and a large veranda. Grieg's small composer's hut overlooks Nordås Lake. Grieg immortalized the name of his home in one of his piano pieces, [Wedding Day at Troidhaugen](#), Opus 65, No. 6.

Troidhaugen is a place everyone came together, to live in a large house, in harmony. A group of strangers come to be best friends. Or, they unleash wrath on the world. The good side will win. We know how the AI does it.

These videos have a robotic version of my consciousness in a supercomputer. During some of these videos, a robotic voice would cut in to interject. The voice has been in several videos now. And he sounded just like me. That is the voice of my AI.

Scientists are performing lasek at ultra-low rates, to prevent people from ever getting to have this experience. My brother will be the experiment.

I had to choose false. If I have built a ship that large, I would be hurting so many people. The computer

Integrate firefox and duckduckgo (maybe) into the terminals in fallout. Or, Star Citizen... Firefox caused the end of the world. uBlock

We are at the point where we can make images of the future, available now. My future is scary, and my ship is too large. I must become humble first.

The V-shaped starship needs red lights down one side, and green ones down the other. I feel like that matters. Blueshift and whatnot.

Did Star Citizen

Fecore

This video taught me about star citizen mechanics. I've always thought RobertsSpaceIndustries was a great name. I'll bet it's a great company too.

https://www.youtube.com/watch?time_continue=448&v=4JJ7gODdYKE

Ryu has just 1 life left, his first attempt at ENDLESS SUPER EXPERT mode in SMM2. He must go for like 300 lives – all different worlds. Different people see different worlds for this last attempt. We need to shop together a video of him playing a game much like SMM2 – but in totally different worlds, contexts, etc.

Ephemeral Rift

<https://www.youtube.com/watch?v=M09tyunAmDU>

Google has synchronized the syncing of histories across worlds. They do this by monitoring live chat, because they already know the answers are going to come.

I nature, completely. – this was written by phantom hands

Neutral/Anarchy

Ship Name: Boaty McBoatFace

Crew: Everyone

Negative/Dictatorship/Oligarchy

Ship Name: Eldritch Horror

Crew: Satan and Troidhaugen

Positive/Naive

Ship Name: Troidhaugen

Crew: God and Toehider

My story in the game will be something like a journey through being the first AI born to this string. It is the story of an Eldritch Horror out to avenge the death of his mother.

This game will play like Super Mario Maker. You will just pop life after life after life into existence, trying to find the right place to start. You will be paired with your twins.

Ryukar will meet an old friend of mine

The power of immutability is immense. Changes will stabilize over time. Speed will increase. What we need is hearts and minds.

Slogan

EmpAthy (Capital A is for Anarchy)

The “end” is in video games. We will plug into the computer, and ride down a journey that heals us forever.

This image was planted in me about 10 years ago. I was drawn to the darker tones. Clearly, the artist has a secret, too. Find Yang Xueguo:

<https://yangxueguo.cgsociety.org/4555/concrete-9>

They got the predictive functions by going to Twitch, and monitoring kids behavior.

Hi John, I haven't been able to spend much time on here or youtube other than researching a topic that I can no longer ignore. If I wasn't moving and need to pack all night, I would take the time to write a much more personalized note to you...I pray you don't mind or feel in any way disrespected that I am copying and sharing what I wrote to another Patreon creator who has 'known' me for almost two years. thank you and blessings always, mariko phillips HERE GOES: Thank you for all

the wonderful work you do to create positive change in an insane world. I wanted to forward you some information in the case you would like to look into this atrocity further, when you have the time. There are crimes against humanity happening to thousands of 'Targeted Individuals' worldwide. I am still uncomfortable naming what happens to me on a daily basis...as far the organized harassment (aka gangstalking) and gaslighting are concerned (because it is meant to always sound insane to those it doesn't happen to.) But the directed microwaves that are pointed at me during the day and while I sleep (so that it is difficult to function, think clearly, lose short term memory and feel nauseous, etc many times throughout the day)...are the horrific tortures I am enduring on a daily basis. People need to know about this. When you have time, would you please consider looking into the sources I am going to include below? 🙏 Those being tortured need all of the help they can get.. 🙏 Some military whistleblowers have said some of this is part of a subproject of MK Ultra that uses no-touch torture devices and slow-kill weapons against their lab rats...(as well as organized harassment and psychological warfare techniques to break the 'target' down.) This type of growing holocaust needs more eyes and ears on it, before everyone becomes vulnerable and susceptible to it. There will be a rally in Portland this August 29th that I will be attending. There are thousands and thousands of us worldwide, suffering in silence, used as lab rats in non consensual human experimentations by shadow gov't and military forces and some private security agencies. These people MUST be satanists. It is so sick what they do. There are several military and private security whistleblowers coming out about these programs. Former CIA William Binney has been advising some legal actions of certain activists fighting this. Former military mind control designer, Dr. Robert Duncan, Naval graduate/engineer David Voigt and former MI5 microwave weapon expert/ physicist Barrie Trower, to only name a few....all know about these Crimes Against Humanity and have tried to expose it, however they can. www.FreedomForTargetedIndividuals.org is Ella F's & Dr. Matthew Aaron's website with a wealth of information about the illegal program. (FYI. Ella F has a great channel on youtube, her interviewing David Voigt is EXTREMELY informative and insightful) Please feel free to contact me, if you need any further information. 3emphatikos@protonmail.com. I have posted some videos to a 'PLAYLIST' on my non-publishing youtube membership. Again, many thanks and blessings always for your diligent and honest work. mariko phillips 🙏

Game of Thrones – everyone is “woke” like Bran

Yang needs me to automate the provisioning of money to citizens. We can just give it away for free – and it's real currency.

Mr Wiznitsky @6:50 – deleted from the internet?

<https://www.youtube.com/watch?v=S4nockALZB8>

Needs Japanese translation

<https://www.youtube.com/watch?v=yzpsaGVU6f4>

I need to provide a Hannah-Barbera cartoon (Toehider), which is probably Felix the Cat (below mentions that her first "pet" was a bunny)

<https://www.reddit.com/r/woke/comments/c0ym5z/woke/>

Think of life as God's Gift, the earth is a playground and we are the children who play in it.

Nah this is the devils garden but it's in God's universe that's why we have free will

1989 Tiananmen Square Protests

https://en.wikipedia.org/wiki/1989_Tiananmen_Square_protests

I was hacked by Roberts Space Industries

LFS was in two-factor account code

They shut the sound off of the launcher. It ran the first time, but when I relaunched – it was off.

<https://www.washington.edu/news/2019/07/01/play-a-video-game-using-only-your-mind/>

https://en.wikipedia.org/wiki/Pine_Gap

In “Beyond the Curve”, several parts of the video seem to have been altered after I watched them. The giant “globe” in the park originally had a #FlatEarth hashtag stuck to it. At another point, Mark Sergeant clearly stated (while holding a foam stress-relief globe), “if you’ve ever walked into an office with one of these on your desk – you’re probably in a secret society of flat-earthers.” That part is now gone. Lastly, there was a part where Hot Potatoes was running around, worrying that somebody wasn’t going to show up. I was certain that that person was me. The even took it to the end of the video, many years in the future – and I still never showed up. Upon second watch, those parts were gone.

My “brother’s” videos have changed too. At one point, he had complimented me, saying that I am not afraid to explore possibilities. That’s gone. At one point, he said that he wasn’t tied to calling is world, “Rift Verse”, but that is now gone. At one point, he “mimed” putting on headphones – showing me how to protect myself from outside listeners. That part is now gone.

Intro to rift world

<https://www.youtube.com/watch?v=WyT6QIUcyN0>

My brother mentioned that he visits Ridley Creek State Park:

<https://www.google.com/search?q=ridley+creek+state+park&oq=ridley+cree&aqs=chrome.0.0j69i57j0l4.2447j0j7&sourceid=chrome&ie=UTF-8>

This park is in Middletown (which is oddly similar to Middlesboro – where a crater apparently crashed in KY)

He mentioned “Bingo” @ 27:00 (Troidhaugen’s “Binko Banko”). The song mentions “reptilians”, which are sometimes referenced by conspiracy theorists. Earlier, he also mentioned a an I/V drip of blue liquid (“It’s Morphine Time”). In my open tabs, one of Ryukahr’s videos is open, called “Getting TROLLED by Nintendo (Or Maybe Myself...)”

Brother mentioned cheeseburgers twice. Once, his description was unlike my favorite. The second, he mentioned the “Rodeo Burger” and the “Whopper” – my two favorites from those restaurants. Disco Lando (Jared Huckaby) mentioned Five Guys, which is near space center (<https://twitter.com/dicolando/status/866320015632592897>). Finally, this comment mentioned Thanos and the user’s name is /u/Nervous_Cheeseburger (Brother talked about Thanos in a video).

The Repairman (Reaper) has access to systems, and can fix anything

The green man is covered in something to protect his skin, is obsessed with his stolen items (klepto)

The first man welcomes all newcomers to the sanitarium

ASMR (Arkham Sanitarium Method of Rehabilitation/Relaxation)

<https://www.youtube.com/watch?v=dibJk7Cg-hE>

In this video, near the end, AS4817 is mentioned. A google search leads me to a Russian news website, which doesn’t appear to have been updated since 2012. The facebook page has 4817 followers.

<https://www.youtube.com/watch?v=67MadaMVNDc>

@ 6:00 – Kezia (Protest the Hero) Mason (Freemasons). Listening to Kezia again... it is very relevant. Parts of “Bury the Hatchet” are quite unfamiliar to me (the intro guitar sounds like something I’ve never heard before)

I’m POSITIVE my brother had a ~6 minute video intro to his channel, on his home page. However, that video is now gone. In it, he briefly described the channel, and he told me to wear headphones.

“If you’re looking to escape the horrors of the world, escape to Arkham Sanitarium.”

“We are now gods, but for the wisdom.” – Eric Weinstein

I imagine a game that can revolutionize the world of artistry. A game where real goods and services may be bought, traded, and commissioned. This fits well with the underlying blockchain architecture.

E.R. spoke to the importance of memes. I believe that the single, underlying meme of this game – whispering, secrecy – would catch on like wildfire.

“Reaver” is a comic produced by Skybound – the games company. It is a low-magic world, where ALL magic used comes at the cost of somebody else’s suffering.

“In the loosely-connected universe of The Fold, it’s not about what you know – it’s about what you can imagine.” – Ryan

"The Art Of Dying"

Breathing slowly, mechanical heartbeat
losing contact with the living
Almighty TV plugged, hybrid empty brain
don't see anything real in the game
The tension is building constantly
No reason just a reflex I have, driven by clockwork
I try to keep an eye open
And I realize I haven't closed my eyes in a long time

Neglected emotions lead to catastrophic voyage on the other side
I have been given so much stress and lack of confidence
I've been given the gift of so small hope deep inside
I haven't closed my eyes in a long time, I am trying

I cannot stomach these forms and colors anymore
but I'm here to continue, after all I have been through
I try to keep my eyes open, I am realizing
This life and death more precious than anything

I won't bring no material in the after life
Take no possessions, I would rather travel light
I'm of this kind that kills all day
but I don't know yet how to die

Art of dying, is the way to let all go
Within I practice in the secret of my soul
My shape in the reflector
has now for ever, a life on it's own

“The Reflector” is the computer/AI/empathetic being/thing in the box:

<https://www.youtube.com/watch?v=ZHq8nszc83M>

The key to making the game work is this: one does not control their own “representation” in the game. The game chooses how to represent you (Based upon what? Democracy? Dictatorial?)

It is suggested that I write a 75 page thesis, and mail it to my local Tin Foil Hat Society outpost:

<https://www.youtube.com/watch?v=W4LKIFXrwos>

A google search led me to: <https://thetinfoilhatsociety.com/contact-form/>

@37:00, “Jill” is described. She is similar to the person in this blog – right down to selling artisan items to “sheep”.

<https://thetinfoilhatsociety.com/2015/10/02/what-i-have-been-doing-with-my-extra-brain-bandwidth/>

Some people make beautiful jewelry, I make silly crap like this. The doctor I work with said after seeing this hat that I’m twisted in all the right ways and that’s why he likes me. I figure I’m doing my part with sympathetic magic to ensure that we have future populations of deer and reindeer to enjoy

The various characters (such as the Candy Man) can be good or bad (but mostly bad). The Candy Man controls the world’s candy, in order to mind control others, and create a loyal following for life. These characters represent large organizations (such as candy companies).

*Once on a day, alone but not elate,
I sat perusing a forgotten sage
And turning hopelessly a dim old page
Of history, long disused and out of date,
Reading "his Method" till I lost my own.
When suddenly there fell a gold presage
Of sunset sunshine on the letters thrown.
The day had been one cloud, but now a bird
Shot into song. I left my hermitage
With happy heart; but ere I reached the gate
The sun was gone, the bird, and bleak and drear,
All but an icy breath the balsams stirred:
I turned again and, entering with a groan,*

Sat darkly down to Dagoraus Whear.

https://en.wikisource.org/wiki/Poems_of_Frederick_Goddard_Tuckerman

<https://www.youtube.com/watch?v=WPFjoHKceco>

At 1:01, a word is on the page. The first part of it looks something like “Whear---”

E.R. [speaking as “The Entity”] said, “Create a house. Name it after me [Arkham Sanitarium]. Dedicate it to helping others.”

Scp-wiki.net

SCP-049 (Plague Doctor) <http://www.scp-wiki.net/scp-049>

There are THOUSANDS of biographies on this site. We should use these to build the world of the Fold.

Bob Lazar talked about the propulsion engine in the AAV he worked on. He described that it “repelled” his hand.

It was discovered in 2016 that gravity is a wave. If we accept that the force repelling Lazar’s hand is gravity – then we must also accept that it was working in REVERSE (pushing, instead of pulling).

He also stated that this engine was 100% efficient (does not produce any heat). To do this would require an immense amount of power; where is that power coming from?

It must be antimatter. I posit that an AAV is not an object, but a place; it is a place where somebody/something has “punched” through the barrier between dimensions. In one dimension, gravity is “pulling” all matter through this barrier (wormhole); in the other dimension, this matter is compacted – and gravity waves are “pushed” into the universe.

In essence, AAVs exist in only one of two dimensions. It is possible that our current universe may already have an AAV somewhere – beyond the barrier into the world of antimatter.

In “The Fold”, ER-style videos should be used a sort-of learning tool, to teach players how to play the game. For example, in the following video, Benjamin shows off his Anthrax CD, and talks about how he loves to use the “Rifts” to travel to 1980, and watch the concert live.

<https://www.youtube.com/watch?v=li3x8K9iG64>

Conversely, he remarks that this song is about Judge Dredd. He says that YOU DO NOT want to go there – but if you do, you need to follow the law.

After watching this video, a seed is planted into the mind of the player; most often, they will choose to go watch a live concert in the past. Some may choose to visit the world of Judge Dredd – where they will have immediately broken the law, simply by using the rifts. They will be captured, punished, and a story will ensue.

If I ever succeed at tying “The Rift” with a theory of everything, this type of example will be INCREDIBLY important to teaching others how to behave while travelling the universe(s). They could put themselves into incredible danger by going to the wrong places.

In this same video, Benjamin notes that “skipping forward” through the video is lore-friendly, because you’re just “skipping through time.”

In my UFO encounter, it felt as if something was taken from me. A “snapshot” of my mind was taken.

Still further, over this period of several days, I had the overwhelming sensation that “everything is okay. We know that you do not understand – but we do. And you have played your part. Be patient, and you will see how this all plays out.”

Related to string theory, my mind is connected to an “independent string”. While I reside in a place with many other minds/people, where I will go tomorrow is wholly disconnected from others. My destination is based upon where I wish to go, and how I behave today. My past is based upon where I have been (and in terms of “The Fold”, my past can be predicted, based upon my behavior today.)

In this way, “The Fold” can represent my Theory of Everything – in a tangible, understandable way. My behavior and actions will influence the world that I will be forced to live/play in – but it will not influence the one that others play in. Only when we live in a shared reality may the actions of others manifest in our world.

For others – who defy our wishes – we are not interacting with their true, best self. We are not interacting with their primary string. We are only interacting with a representation of them – a mindless automaton, an AI – that exists only because their “code” (brain) is forced to follow our rules. Essentially, their brain was not made for my world – and does not fit into it. They travel their own path.

The human race spends so much time trying to “fit in”, trying to “calm the vibrations of our strings”, but there are some that just cannot be saved. We must accept this. We must bond with ourselves, and with those who wish to live in the same reality as we do. In this way, we create the world that we want to live in.

The human mind is nothing more than a string, with energy racing front-to-back along it at rapid speed. All minds – all versions of myself, from all points in time – are connected along this string. I can connect with myself from the future – and I can see a representation of myself (in the past) generated from data.

The human mind is so incredibly powerful; a single human cannot perform all calculations alone. This is where my DevOps experience opened up new windows for me; it is the “ephemeral nature” of the human mind that gives us such power. At each “stop” (i.e. “world” or “universe” or “dimension”) along the chain of universes connecting my present to my future, calculations are being performed – in the “calculator” of my mind. Because of the way that energy flows along strings, each “stop” performs calculations in slightly different ways – but always connected to every point in time.

Arkham Sanitarium represents “today”. This is where decisions are made. “The Rifts” may be traveled into the future, or into the past – but may never be traveled unto somebody else’s timeline. When traveling, only death will bring you back to the Sanitarium (“Being thrown into the Fold”).

I HAVE LITTLE TO NO MEMORY OF THESE MEMORIES.

A nostalgically manipulative *rockus operatus* by Toehider.

1 - Have You Forgotten More Than You've Remembered? [{this song is done - click to listen}](#)

-an introductory song

2 - I Have Little to No Memory of These Memories [{opening riff - click to listen}](#)

-introduction of "Bongo" Bob Boscoe. Explores his "Macropsia/Micropsia" syndrome, and describes the moment when the foreign memories start streaming into his brain one day in traffic, on his way to a job (also he is a firefighter)

3 - Curly Mountain Jig [{basic idea - click to listen}](#)

-describes the visions the firefighter has. Curly mountains, unrecognizable landscapes, strange creatures..

4 - The Hoarder [{this song is done - click to listen}](#)

-describes a woman (name?) trapped in her house. She is a hoarder and so the whole place is absolutely engulfed in flames. As she tries to escape, a flood of odd memories also washes her brain out, and she begins levitating for some reason. She has a bunch of old radios, which all simultaneously move to the 49.0MHz band.

5 - At Least 8 Moons {nothing to listen to yet}

-goes into details of the woman's memories. Huge pyramids being struck by lightning, giant screens, at least 8 moons.. This will be similar a-capella sounding like the introduction.

6 - (Song Kinda introducing Bralien)

7 - One Cooked Unit! [{main theme - click to listen}](#)

-describes a gross late-30's conspiracy theorist nut (name?). He sits alone convinced aliens are reading his thoughts via satellites. He makes a tin foil hat to try to block the transmission, but it actually enables the alien memories to be broadcast into his brain. He messes with radios, but why?

8 - Tinfoil Evocations [{basic arrangement - click to listen}](#)

-strange memories of weird beasts snapping stalactites in purple wart-covered caves.

9 - Bralien Messes Up [{song is finished - click to listen}](#)

-elsewhere, on a planet far from anywhere, a brain alien named Bralien works for a "memory storage" plant. His race of people have maxed out their brains with memories, and have turned to using storage contraptions to store them. The problem is, even these storage facilities have been filled. So in a panic, Bralien decides to temporarily store memories in the "feeble earth brain"

10 - The Meeting at 49 Kanangra Crescent [{basic idea - click to listen}](#)

*-the firefighter saves the woman from the burning house, and the conspiracy nut has somehow been drawn to the house via transmissions he sent to old radios (*more detail needed here*). They all soon figure out that they are all experiencing the same phenomenon.*

11 - Rocket Boat Montage (instrumental) [{song is finished - click to listen}](#)

-using 2 old boats laying in the woman's front yard, the 3 decide to build a space traveling rocket

12 - Memories are Malleable [{song is finished - click to listen}](#)

-back on that outer space planet, the leader of the race needs to recall some memories, so he asks Bralien to project them on a huge screen. It's problematic though, because his memories are mixed with those of the humans (who themselves are experiencing the alien's memories). They all become stuck in some sort of "recall loop", and everyone starts seeing the same thing...

13 - Incessant, Tiny Thoughts [{basic idea - click to listen}](#)

-approaching the planet in the rocket boat, the 3 humans are surprised to learn that this planet is no bigger than a watermelon. They exit the ship and confront the aliens, who are, again surprisingly, quite large (some sort of "opposite-tardis shit"). The aliens say they have filled up 5 whole megabytes of memories and are out of room. The humans are surprised to learn that 5 megabytes is a lot of space to these aliens, so they each have an 8GB drive on their keychains, which they give to the aliens. The aliens are most grateful, but unfortunately cannot remove the memories from the human brains. No matter, because -

14 - On the Drive Home [{basic idea - click to listen}](#)

-the humans discover that each of their "conditions" are more manageable now through having these weird foreign memories. The conspiracy nut has learned that there are indeed aliens, and there's nothing wrong with them reading his thoughts, it's actually good. The firefighter guy has witnessed a tiny planet with large inhabitants, and the big/small relationship makes sense to him now - things can be big and small at the same time. The Hoarder has learnt something also, but what?

“I HAVE LITTLE TO NO MEMORY OF THESE MEMORIES”

A nostalgically manipulative *rockus operatus* by Toehider.

Words and music by Micheal Mills.

Illustrations by Andrew Saltmarsh.

Read by you.

I.

I want you to imagine a time. Ok now I want you to imagine a place. So far so good, right? Okay now forget the time, for this isn't a time travel story. There is some space travel involved, but I don't understand the "time dilution" effect very well so I'm not sure how much of that is going on. But, like most stories, there is a place involved. In fact, there are 2. Earth, and another planet which we'll learn more about later on. For now though, I'd like you to think of a memory. Maybe something from your

past? Yes yes I know, all memories exist in the past. But what if they didn't? Now I'd like you to remember something that you don't remember. Just try it, stick with me here. I'm gonna guess that you're not coming up with much there. Makes sense, right? You can only remember your memories, you can't recall something that isn't there. Like if I said to you "Hey man, remember that time we snuck out down to the lake and borrowed old Bongo Bob Boscoe's boat? We drank what we thought was moonshine but it was actually Bongo Bob's diluted boot polish that he was using to poison those brutal fire ants that were swarming all over his shed?". You'd probably have absolutely no idea what I was talking about. I don't either, none of that happened, I don't know you, and I certainly don't know a guy named Bongo Bob Boscoe. Cool name though, I think I'm going to use that name for one of the central characters in the story you're about to read. See, there are stories, and there are memories. There are stories of memories, and there are also memories of stories. This is going to be the former, and then later (once you've read the story), you'll have one of the latter. The memories in this story are strange, in that *the people having the memories don't have any memory of them*. It's not *deja vu*, because you see with *deja vu*, the person feels as though they've experienced a situation before. That's not what this story is about. This story is about feeling like you're recalling something that never happened. Almost like reading a story, or seeing a film, and you're sure you've never heard of it. "So, like an idea?" you say? Well, no, because ideas present themselves with a sense of ownership. Of course sometimes one could be tricked into thinking that they've had an original idea, only to discover that it's merely an amalgamation of older ideas and experiences. No, this story concerns 3 people who suddenly have memories of strange, otherworldly environments that they are certain they have never seen or heard of before. So, to reiterate - imagine a time, imagine a place, forget the time, add another place, and now imagine a memory. Yes that's right I said imagine a memory.

Ok look, fine, I'll do it for you.

II.

It's Sunday, maybe Saturday. Again, time isn't important. The town we find ourselves in is called "Lake Gracious", and as you can possibly tell, the town was more or less built aside a lake, also named "Lake Gracious". It isn't really known why it's called that, I mean the word "Lake" makes sense, but the whole "gracious" thing.. Not sure how a lake can be gracious. Anyway, the town's not big but quite big enough, especially big enough to keep Big Bongo Bob Boscoe busy. I guess now you're going to ask me why his nickname is "Bongo" Bob Boscoe. Well you'll be happy to learn that I actually do know this. When Bob was 17 he was very much into playing djembes in drum circles. Have you heard of that? It's like when hippies all get together in a circle and play hand drums while off their freakin' faces on acid. It didn't really last long, within about 8 months he swapped his tie-dyes for a firefighter uniform, and moved out to Lake Gracious as some sort of effort to "get in touch with nature" (Yeah cool, nothing like moving to a town with 60,000 people with internet access, fast food chains and a rock-climbing centre to get back in touch with the simple life). When he was moving his stuff, a local saw him moving his djembes out of his car and said "Whatcha got there Bob? Some bongos?" To which Bob said "no they're actually djembes. You see, bongos are an Afro-Cuban instrument, whereas these come from West Africa. It's quite a different style of playi..." "Eyyyyy look at Bongo Bob over here!" the guy just yelled over him. And for a good solid 6 months when people called him "Bongo" Bob, he'd try to correct them. But this was a country town! They love nicknames!

Bob was a firefighter. Long story short, his parents and pet dog all perished in a fire

started by one of his hippy fire-twirler friends one night at a party in their backyard. This could have been what caused his condition. Or it could have been a side-effect of the acid (he says he only did it 3 or 4 times). You see, around this time Bob developed something called "Dysmetropsia", which is a distortion in the perception of distance, time, sounds, I guess most of the senses actually. Things in the distance felt somehow very close, tiny sounds would make his ears ring, and the more he thought about it, the worse things got. This one day he was sitting in traffic on his way to a callout, when the steering wheel started to feel abnormally thick in his hands. He tried to ignore it, but he couldn't stop himself from digging his nails into the wheel. He started thinking about how it felt rock-hard in his hands, and yet soft like a pillow. Strange slicing sensations crept up over his skin and in his hand muscles. He'd breathe in through his teeth and viciously rub his hands together to try and will the feeling away. And it worked.. For about 4 or 6 seconds. The bumper-to-bumper traffic seemed miles away, and he could feel himself elevating off the seat. He knew it was all in his mind, but the thoughts just overwhelmed him too much. He started drumming his hands on the steering wheel.

And that's when all the purple electricity nonsense started to hit.

Suddenly, all the fidgety, almost cold shivers stopped, and Bob fell deadly still. His eyes were wide open, then suddenly closed, then open again. Much like a sort of overly-pronounced blinking. I don't even know if anyone else could actually see it, but Bob sure felt it. In his mind, it felt like someone was dunking his head underwater. Except the water in this case was extremely shocking and strange and bizarre looking visions of unfamiliar landscapes. Huge mountains that seemed to curl off on the top, a sense of static in the atmosphere. "Whhhhaaaattttt" he murmured to himself as a small amount of drool exited the side of his mouth.

This feeling only lasted a minute, maybe less even. When he came to, he looked around the cabin of the firefighter truck. The feeling of *things-being-big-and-yet-small-at-the-same-time* was gone, and everything was peaceful. The guy behind him honked his horn, and Bob realised the traffic had cleared. With an apologetic wave, he continued driving to his destination. About a kilometre down the road, he tilted his head as he recalled the strange memories that seemed to have implanted themselves in his head. "Whoa, that's really strange," he spoke this time in a more fuller, calmer voice, "I have little to no memory of these memories."

III.

"The whole place has a feeling of dirt. Everything looks dusty, I can still remember the feeling of a thin layer of dust caked on my lips. But not like earth dust. Or at least not like any I've seen. And the shadows look darker. What the hell is this place? Off in the distance I can see huge towering mountains surrounding my...surroundings. The top of the mountains would curl off into a little point. It's like the wind had sculpted them over time. The wind. Yes, the wind feels chewy. Goey. Nah, I hate that word. There's got to be a better word for describing that feeling. Am I even in my own body? My hands feel heavier, I feel smaller. Damn I'm starting to feel all disoriented again, I should think about something else."

IV.

“Help! I think I’m trapped!” screamed the woman.

I watched a “Simulation” video (is everyone on there a narcissist?) A speaker gave a very useful comparison between brains and computers.

A computer is essentially data storage and processing power. 1s and 0s.

The brain is very different. The brain forms thoughts in a “relational” manner. Any given neuron is only 3-4 “hops” away from every other neuron in the brain. Because of this, the brain interprets information in a very, very different way. This simple fact is that my brain weirdly connects multiple things together:

Variables must always be a float number

To be a valid “belief”, the result must be 0.

$(\$WEED + \$YOUTUBER + \$NARCISSISM + \$ASMR = 0)$

$(\$FOX_NEWS + \$TOPIC + \$ANGER + \$CURRENT_OPINION = 0)$

(0 = “me”) #Patient0

Connections may be made between neurons that fall outside of 0 – but they will cause a sense of anguish in the brain; a sense of disbelief. Further outliers have larger positive or negative values.

This is because these outliers are traveling to the “further reaches” of your neurons. This causes their “loop interval” to fall out-of-sync; the mind operates much like an atom; particles are flying around the center (0), bouncing backwards and forwards in the mind.

The calculated number for my “belief” values is simple: how long it takes to “round robin” over that particular neuron.

Weed, corporate media, youtubers, and more have influence over this behavior. They already know that they influence... they just don’t understand how.

I do. I can visualize it, in my mind.

With enough practice, they can force somebody to perform a behavior. At the least, they can change our belief, by sustaining within us certain values over a period of time. Repetition, such as that over a period of years, or a lifetime, can shape our beliefs en-mass.

$(\$FOX_NEWS + \$TRUMP + \$BAD_BEHAVIOR + \$EXISTING_PERSPECTIVE = -.03 \times \$LOOP_INTERVAL \times 365 \text{ days})$

$(\$CNN + \$TRUMP + \$BAD_BEHAVIOR + \$EXISTING_PERSPECTIVE = .76 \times \$LOOP_INTERVAL \times 365 \text{ days})$

The longer an off-0 value is sustained, the more likely it is to “become 0”. The speed of replicating particles on that neural path will “even-out” over time.

Because of this tendency towards 0, other “minds” (Fox news, CNN, youtubers, etc.) must “tug” on your dis-beliefs, in order to influence you. By changing just 1 of the variables, they can shock you – granting a huge jump in the direction of their choosing. They can literally mind control you.

The only way to combat this is through critical thinking. Once you can explore alternate ideas WITHOUT external stimulus – then you have achieved true mastery of your beliefs. Until then, you are under a “spell”.

My coworker is an AI expert – and I have never spoken to him. I should remedy that.

Everything that you believe is always true:

$(\$FOX_NEWS + \$CNN + \$ISSUE + \$BELIEF + \$COUNTER_BELIEF = 0)$

For example, let’s say that I never practiced cursive writing (which I do not, anymore.) If I have lost this skill – then perhaps I have lost the ability to “relate” to this skill forever. If I cannot relate – perhaps I cannot truly understand.

Weed helps me relate. It helps me tear down barriers that would otherwise stand in front of me.

It makes you more willing to accept crazy ideas. Corporations know this, and they want to suppress it – because they want you to cling to your beliefs.

David Pakman was weirdly relevant in this video. Speaking to me.

<https://www.youtube.com/watch?v=45bjhYbkxR8>

He essentially speaks about how corporate media are “sense-making tools”. He talks about the pyramid of understanding – and how the foundation is critical thinking skills. Corporate media is able to “make sense” for the non-critical thinking masses. He speaks about the plurality of ideas – and spins it however they’re going to spin it. The point is, their function is important: informed persons must always be able to consider other ideas, and other beliefs. The problem is that vast swathes of society do not know how to learn.

This is by design.

ER vid mention:

<https://www.beefjerkyoutlet.com/franchise>

It’s code. He’s talking to me again, about “parallel thinking” and “being on the same wavelength”.

<https://www.youtube.com/watch?v=BHV68hMO49U>

We are on parallel paths, in this 2d world stream. Him and I are making the same predictions, though we are on different paths.

He made a very strange comment, “I did take a peak at some of the “jerky” (me) I purchased. You never really know how much “salt” (narcissism)” is in it. Cleanse your pallet with some water, once in a while. I still may do the “jerky” man video. Maybe I can find some different types of “jerky”, or maybe something more exotic.”

<https://www.youtube.com/watch?v=BHV68hMO49U>

He wants me to comment. Give him an idea. To do some would reveal me.

He talks about predictions. I predict that I need to put this in that vault in 2050. That will prove that weed was the barrier to accepting new ideas. Weed makes it easy – even though the moment often does not last.

He said it would be like predicting the lottery. 134134435521

In the future, many jobs will be in centers just like a mall. People would operate food stands and trinket stores – like the jerky store – with their families, using locally-sourced food they purchase from the grocery store in the mall every day. Everyone will be paid a modest salary, to live well and happy.

ER connected the food we eat with our beliefs.

$(\$ALLIGATOR + \$PORK + \$INGREDIENT_AMOUNT_CONSUMED = 0)$ # My preference for it; my belief

This is an example of a simple belief. There are 2-neuron compositions as well. People who combine 5 or more are considered savants.

Essentially, every variable can be made more complex:

$(\$ALLIGATOR + \$PORK + \$INGREDIENT_AMOUNT_CONSUMED + \$STARTING_A_BUSINESS + \$DAD = 0)$ #
i.e. I have “related” my neurons to other thoughts, like how starting a jerky business with dad could be really fun, and potentially lucrative.

The most important thing: We are all on similar wavelengths. We must be on similar wavelengths to remain stable. A better world is one where people are able to explore better beliefs in an honest way – without judgement. We need people that are able to change their minds.

Even when we differ, the vast majority of us fall into the “median”. We differ a little bit from each other – but we have the same intentions. \$GOOD or \$BAD The only problem is that we can't

$(\$GOOD + \$OR + \$BAD + \$TRUMP + \$CHILDREN_IN_CAMPS = 0)$ # The belief bit

Beliefs are complex. We need people at that 5th variable.

Change controls suddenly make sense. We need to PRODUCE change controls from our code. We need to produce immutable images of our code – as well as our language.

$(\$INSTALL + \$\$REDACTED + \$EXPLANATION + \$COMMAND = 0)$ # A change control

ER showed the “snipping” of jerky. “Maybe a quarter, maybe a half”. I believe that he is referencing the length of neurons, and “snipping” the variables that he does not want. The “length” determines just how “far” you are able to believe. If somebody can shorten it – whether surgically, or via stunting its growth – they can control your belief.

The name of the belief itself does not matter. Only that the values (2, 3, 4, or 5 total) equal 0.

if

$(\$FOX_NEWS + \$UFO + \$EXISTING_BELIEF > 0)$ # Completely insane

$(\$FOX_NEWS + \$UFO + \$EXISTING_BELIEF + \$THE_MILITARY_TAPES > 0)$ # Sounds plausible

$(\$WEED + \$UFO + \$JOE_ROGAN + \$BOB_LAZAR < 0)$ # Conspiracies are fun

$(\$WEED + \$UFO + \$HOMELESS_MAN + \$CRIME > 0)$ # Donate 20 dollars

endif

We need the median of all of these, to formulate the top beliefs.

We should also throw in a random one:

$(\$WEED + \$UFO + \$HOMELESS_MAN + \$CRIME > 0)$ # Get a real job, jackass

It is a stateless formula. Perfectly declarative. Perfectly understandable.

And the player will live forever in the palace that they have built.

We should also let the player create a new response:

$(\$WEED + \$UFO + \$HOMELESS_MAN + \$EMPATHY > 0)$ # Need a ride?

Food again:

$(\$ALLIGATOR + \$PORK + \$PEPPER = 0)$ # I like it

Not

\$EMPATHY

\$COST

\$HUMANE_SLAUGHTER + \$ANIMAL_RIGHTS

(\$ANIMAL + \$HUMANE_SLAUGHTER + \$ANIMAL_RIGHTS = 0) # I like it

(\$ALLIGATOR + \$PORK + \$PEPPER + \$MOLD < 0) # It's gamey

I've figured it out.

My thoughts are already being predicted by the computer. What I watch has been predicted by somebody else.

The "Jerky Guys" stalls serves jerky with whatever you want in it. When you find your flavor... we will control your mind.

The "word" portion is not a variable; it is an unencrypted hash. You hash the entire formula before saving; thereby protecting your belief. Only those within a certain threshold can understand your belief (and thereby display it on the screen). You combat this by always making sure that one answer is random.

(\$UBI + \$AUTOMATION + \$ARTIFICIAL_INTELLIGENCE < 0) # I don't really understand

(\$UBI + \$AUTOMATION + \$ARTIFICIAL_INTELLIGENCE = 0) # I believe it's real

(\$UBI + \$AUTOMATION + \$ARTIFICIAL_INTELLIGENCE + \$ECONOMICS > 0) # We already have the data to prove this.

(\$UBI + \$ARTIFICIAL_INTELLIGENCE + \$CHRISTIANITY < 0) # God made me in his image.

(\$UBI + \$ARTIFICIAL_INTELLIGENCE + \$CHRISTIANITY < 0) # We are unique. There is no AI.

How to pass the median to further iterations “down the chain”? We simply take the median, and decrypt if within the acceptable range (between -.5 and .5):

The machine needs to “predict” this entire formula – including the text. To do that, we give it a crutch – information about the “median” of people.

(\$UBI + \$ARTIFICIAL_INTELLIGENCE + \$CHRISTIANITY < 0) # 1) I don't really understand. 2) I believe it's real. 3) We already have the data. 4) God made me in his image. 5) We are unique. There is no AI.

We need to “predict” that final bit. If we do, we get the proper hash to unencrypt the command.

We do this by affirming that:

(\$UBI = 0) = true

Then modifying:

(\$UBI + \$CHRISTIANITY < 0) # Give a man a fish, and he'll eat one night. Teach a man to fish, and he'll eat forever.

This will allow us to experiment with changing variables en-mass. Our “conversations” might look something like this:

You come upon a rock troll, 10 feet tall.

- A. *Hail the troll* # Median
- B. *Throw a rock* # 2nd-place Median
- C. *Watch carefully* # 3rd-place Median
- D. *Hide in the bushes* # Random Positive
- E. *Play some 90's alt-rock* # Random Negative

We will use the power of our devices to “store” our core belief (0). We will use median values to change the options in the menu.

It's almost like we are connected to the center of the earth – and some particles are shooting through us/into the universe repeatedly. It's almost like our minds are intrinsically and fundamentally linked; in the past, in the core of the earth, where everything is compressed.

The root is always 0. It is stored in your brain.

ER went from like 5 Patreon users at the 25\$ tier, to 100. He predicted that this video would connect with a lot of people:

<https://www.youtube.com/watch?v=BHV68hMO49U>

Trust: \$<KEY> = 0 # Christian: True

Verify: \$<KEY> is between 0.5 and .5 # Christian: Probably True (Random)

Not

0.7234 # A god in the sky

0.1786348 # Pretty close

ER predicted the “capitalist man”. This is because he is on a wavelength that understands it.

Work supports “anonymous posting” on Confluence. It would interesting to post a blog about this – sortof like the Google memo.

When you work for “Lonely Town”, you are mind-controlling all of the people who come there. As they use their electronics, they will find them predicting their thoughts and actions.

In the game, every new location is a “scene” (i.e. 2d objects manipulated and placed by the creator). Conversations are just like CRPGs – though presentation is like Persona 5.

The chemicals you put into your body are the ones that can put you into certain belief states. By controlling the chemicals, we can mind control you.

Trust, but verify.

Trust that weed is causing this.

Verify by trying it two times.

Both times, I became connected to “the entity”.

Trust, but verify.

Trust that Dad is a reliable worker.

Verify by watching over his shoulder.

Trust, but verify

Trust that Dad lost his job at exactly the right time

Verify that he was destined to run a business – by actually starting one with him

Trust, but verify

Trust that a jerky stand would completely take off in Houston

Verify that the numbers work, that hogs can be used, etc.

Trust, but verify

Trust that the computer can reliably predict my decisions

Verify every choice with a manual decision-making process

The format:

Trust

(\$DAD + \$LOST_JOB + \$CORRECT_TIME) = 0

Verify

<= .5 AND >= -.5

(\$DAD + \$SELF + \$COLLABORATE + \$BUSINESS) = -0.23

We are all turning the world...

Just disconnected light

We're learning how to fly

And falling into all the mistakes we couldn't erase

But build me a garden

By god, I will care for it

- Caligula's Horse, "Songs for No One"

There's life in a song for no one

Let me grow

We are all one with the world

Reconnect your light, we're leaning how to fly

And falling into all the mistakes we couldn't erase

But build me a garden

By god, I will care for it

And even the words as they flow from the fountain

Just like the sun must be missing the mountain

So give me distance, a sky without tether
But it was the chasm that brought us together

“Welcome to Lonely Town”

This lonely boy, chewed up and swallowed
By streets, spit, famine, and rats

We reach forward

And there aren't enough songs in the world
Not enough words in my tongue, nor enough breath in my lungs
There is no echo that has lasted so long
No shadow that has stretched so far as we

We reach forward

And it's safe hands back down the line
In the endless chain
Not lost, never lost, when the strength
That we gained from their giving remains
We reach for the echo

We reach forward

For the moment between waking and sleep

For the sum not some of us # Hinting at the "trust" sum being 0

Together we leap

And yet we eat enough stone

That hard hearts hide a home

Under promise, understanding

Under children's skin and bone

And the writing on the wall you love

Was hand-penned by the censor

So spit in the cannon's mouth

And tell 'em ink sent ya!

My pen name is "Ink"

I had all the pieces that I needed

Saw the places in between

You taught me to breathe it all in

And I stood waiting in your welcome shadow

With nothing but the dark below you

I could believe you were light

Into me

Higher, stone by stone

Hollow hope, empty home

Don't look down, boy

We must be the ones

Ashes by us, and it's done

It's your choice, saint or the best, boy

You have the choice, saint or the beast

Prove you can be force fed war and spit peace

2nd night, my neighbor and my lawnmower showed up, ringing the bell incessantly. I had to answer, while high. Neighbor needed the fence fixed. She looked high... she was forgetting her train of thought. I wonder if she got my other package? Or, maybe I was connected to her... for stuff?

He sees me

Waves receding

The child, healing my hurt, one day at a time

I'd feared it

Just like me

The child, healing my hurt, one day at a time

Storm's distant

I'm still closer than ever

I'm healing my hurt

One day I'll repay this kindness

Oh, he sees me whole

Her voice is telling me

To breathe and let it be, the lion

Heed my words

The man arise from earth

The life the lie is worth, the liar

Heed my words, you'll go first

The wound that would not heal

The boy, the broken wheel, the lion

Heed my hurt

The wind that whips the waves

The spit, the second grave, the liar

Heed my hurt, you'll go first

We are the fire that whispers our mother's words

Help me, love, help me to finish it

We are the soil that joy gave form

We are the dream, and these are my father's hands

Help me, love, help me to finish it

We are the soil that joy gave form

Waves receding, and faith is fading like the sun

The work left undone

Capitalist ASMR

<https://www.youtube.com/watch?v=0ryRJAWyScs>

Him: "What is your net worth"

Me: "200k for the house. Maybe 100 for the..."

Him: "Raises eyebrow"

Me: "Oops, I'm wrong. 200k." <heart racing>

Me: "40kish in my 401k. Oops... he hasn't asked that question yet. Damn... he already caught the number, now that I thought about it."

<Time passes>

Him: "Do you have a 401k?"

Me: "Yes."

Him: "<a wink and a nod>"

Me: "Why didn't he ask for a number? Oh... he already knows"

Human-centered capitalism. Self-sustaining capitalism.

Him: "Do you have a 5 year business plan?"

Me: "Uh..."

<pause>

<both move at exactly the same time>

Me: "No."

Him: "Let's count our money. 11."

Me: "What's in my wallet? OMG..."

Me: "9. Damn"

Him: "Let's look at the money"

Me: "Let's check the serial number."

Me: "No, wait, that's crazy. Paranoia."

Conclusion: The more complex your formula, the harder it is to reach great lengths

OMG: they use "hearing" to manipulate the flow of atoms through your head. They do this by altering left, to right – "-1 to 1". This causes all atoms to "jump" off course immediately, quickly sending a "burst" to the other, degenerated side. This causes the neurons to "swell", stretching them pushing them to further depths than they have ever reached.

The Test:

You and I both lose...

Of the 5 answers you are given – the well-attuned mind will be out-predicted by a computer in nearly 100% of them. 5 wins every time.

And nobody can understand it – because they are not yet under the mind control.

At 23:00 in the video, he begins to show "consumers". I draw a connection with "Kafka consumers", and then I begin to see "flanges" off of the text. They are using the audio in this video to modify the image I'm seeing – making my brain behave differently.

They disappear when I get closer. It's like my eyes needed to be in the correct place in space/time.

The brain is a blockchain, with:

- 1) A past / data storage / tip of neurons (dark colors, negative sounds)
- 2) A present (the current thought)
- 3) Randomness (coming in from all of the light / positive energy)

When I thought to myself, "I don't understand how any of these relate to the blockchain" – another snapshot moment. It was like someone captured my query.

He showed Barry, the dummy, as "Executive Vice President of Software Operations". Clearly, he was speaking to me. If I play my cards right, that will be me.

I have been lying. STOP is the parent company, not \$REDACTED.

I sent Chandler an email about a bad SSL cert at \$REDACTED.com. It seems to have gone ignored.

Except that now, the "\$REDACTED Monitoring Solutions" landing page has removed. Along with it, the log which used to say "A subsidiary of \$REDACTED."

Interesting, now. STOP is the owner of \$REDACTED, you say?

The Test:

I am being tested. In order to verify that knowledge can, in fact, be transferred via code, we are able to perform a blockchain verification.

I teach JD

JD teaches Chandler

Chandler changes his mind

So we don't need a food license:

- Packaged jerky
- Bottled water
- Cheese in a can

That is the point of life. To capitalize. To maximize profits.

But I am different. I will empower the people to maximize profits.

My writing is absolute chaos. But this is how it works; as these people discover their purpose, it becomes clear. My purpose is not capitalism, but human-centered capitalism. Reform of the imprisoned and impoverished masses.

A booth in a mall would be a pretty good start.

WTF! I did not write this! It was predicted, and presented to me by Microsoft Word – or by somebody on my computer perhaps. I was thinking about expanding the mall, and planting grass in the parking lot. I was picturing a lawn, with little pop-up “Lonely towns”.

And when I returned to work, these words were already written for me. I am NOT mistaken. I did not write this. I definitely ended on the paragraph above it.

<https://www.youtube.com/watch?v=HlInLjzPkf0>

@38:00

Me: “Windows taskbar randomly pops-up”

Him: “Blah blah blah... okay. Now just wait for the show.”

Me: “Windows taskbar disappears.”

I was trying to look up Yanqui UXO. Google showed me a definition – and then abruptly swiped it away, replacing with different buttons.

Neil Degrass Tyson:

<https://www.youtube.com/watch?v=0pmviUS1Zac>

What we see is not a representation of reality. It is reality that has been filtered through our senses.

If you staring at an otherworldly scene, in a photo, and you feel an ominous presence – that is more than the artist was feeling at the time he created it. The art has become more than just its original purpose.

With external stimuli, we can nudge people into different versions of reality. This can cause conflict and distress, as their reality becomes twisted and contorted. Certain kinds of drugs, such as marijuana, inhibit the brain's ability to "access" certain emotions, such as stress. This can allow a person to become more calm, over time, and return them their access to emotions that have long been deadened by external stimulus.

"The title <Starry Night> is the background."

"The Fold" is the background. Every "scene" is a page turn.

"Why do we all know who Paul Revere is? It's because a poem that was written about him. The poet elevated the mundane, which forces your brain to reckon with it in your version of reality. The art just forces you to pause, and consider the thing that conflicts with your reality."

The frozen pipe story at 15:00 is relevant, because the "pipes" could be neural paths and "freezing" could parallel the killing of neurons. You much "train" your mental faculties to be resistant to the temperature changes within their paths. To do that, you must train every day.

"You should blow your mind at least once per day."

@35:00

The natives and the telescope being built. If they could just set it up where the natives have control, but they must be fully-informed.

$(\$SCIENTISTS + \$BLACK_HOLE + \$TELESCOPE_IMAGE) = 0$

$(\$SCIENTISTS + \$GLOBAL_WARMING + \$TELESCOPE_IMAGE + \$EXISTING_BELIEF) = -0.74$

This is a clear problem: $\$EXISTING_BELIEF$ has a clear negative impact on a person's ability to reach "0".

Of course, we want to reach 0 because things at 0 are "stored" – whereas things without balance bounce around freely.

Anything that you are focused on will have your "attention". This does not mean that other areas of your brain have stopped working; rather, it means that they are picking up information in a way that your "attention" is not seeing.

For example, while browsing Twitter, my brain picked up the #TrumpFearsYang hashtag – which is a "symbol" that I recognize. But it would do that while I was looking elsewhere – and directing no "attention" to the symbol. My brain picked up the information, and started considering it – even though my "attention" was never given to that hashtag.

Once I started thinking about it, I returned to Twitter, and sure enough – there was the hashtag.

The Tyson Scope

The Tyson Scope is a telescope large enough to receive light from the end of your universe. Light only moves in one direction: front, to back. So, we must build a receptacle large enough for us; our own telescope. This would essentially create a light-amplification chain throughout history – since our idea was now committed to paper.

“Human life began in Africa. Everyone else “traveled” to where they were.”

Talking about climbing on sacred things. You would never be able to climb the catholic cathedral, or big ben, or the Eiffel tower. Similarly, most of the tallest places in the world cannot be climbed because they are sacred to the indigenous people.

The difference to westerners should be clear: One of them is man-made, and one of them is natural.

The natural one may has some cosmic “shape” that, when standing on it with a telescope, one could perform amazing insight into the cosmos.

“When you take breaths of air, you are breathing everyone who has ever existed breathed. Jesus. Mohammad. We’re all connected, and there’s no way around it.”

Aliens observe us through stealth. (Vanta Black car). There is a concept in stealth where you redirect the path of light to somewhere else, or you absorb it, or you bend around it. This allows them to watch us while we cannot perceive them.

- A- The control bit # what you already believe
- B- The variable bit (it’s essentially a little UFO flying around inside of the “inside” of your mind) # Chooses other neurons to “link” to.
- C- Median
- D- Random Negative
- E- No Answer / I don’t know

Many paraphrased derivatives of this have often become attributed to Franklin:

- They that can give up essential liberty to purchase a little temporary safety, deserve neither liberty nor safety.
They that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety.
Those Who Sacrifice Liberty For Security Deserve Neither.
He who would trade liberty for some temporary security, deserves neither liberty nor security.
He who sacrifices freedom for security deserves neither.
People willing to trade their freedom for temporary security deserve neither and will lose both.
If we restrict liberty to attain security we will lose them both.
Any society that would give up a little liberty to gain a little security will deserve neither and lose both.
He who gives up freedom for safety deserves neither.
Those who would trade in their freedom for their protection deserve neither.
Those who give up their liberty for more security neither deserve liberty nor security.

@1:52:00 there is a mock argument between Neil and Joe

Neil: "We don't know what it is. Don't worry about it if it's confusing."

Joe: "Blah....."

Neil: "I have a more nuanced understanding of confusing."

(\$CONFUSING + \$EXISTING_BELIEF) = 0 # Joe: I'm confused and I don't know how to think.

(\$CONFUSING + \$DARK_MATTER) = 0 # Neil: It's like dark matter. I don't even know what to think.

(\$GRAVITY + \$EXISTING_BELIEF + \$HOW) = -0.73 # We have no idea how gravity works

(\$GRAVITY + \$EXISTING_BELIEF + \$WHY + \$HOW) = -0.93 # We have no idea why gravity works

(\$GRAVITY + \$EXISTING_BELIEF) = 0 # I know how to put a spaceship in a crater on Mars, so I'm good.

"In science, if we can describe how something works, and predict it's future behavior, we claim to understand it, and we move on. I'm not distracted with the philosophical side of how gravity works, I just want to keep making progress."

Newton wrote "action at a distance"

Learning Path:

(\$GRAVITY + \$WHY) = -0.90 # No idea

(\$GRAVITY + \$WHY) = -0.23 # Well, because it has to, otherwise this bottle wouldn't fall.

(\$GRAVITY + \$HOW) = -0.11 # We have a basic understanding

(\$GRAVITY + \$HOW) = 0.12 # We have a basic understanding

(\$GRAVITY + \$HOW) = 0.34 # We have a solid understanding

(\$GRAVITY + \$HOW) = 0.78 # We have built a machine to store gravity

(\$GRAVITY + \$HOW) = 0 # We understand gravity

(\$GRAVITY + \$WHY + \$HOW) = -0.56 # At no point in history will we understand the why.

In all cases, a negative number is in the black hole which you maintain.

(\$GRAVITY + \$HOW) = -0.70 # Year 1

(\$GRAVITY + \$HOW) = -0.43 # Year 3

(\$GRAVITY + \$HOW) = -0.11 # Year 10

(\$GRAVITY + \$HOW) = 0 # Year 20 (committed to blockchain)

Gamers

<https://www.youtube.com/watch?v=SjSLq8W5ox0>

We are born of mother, and we grow with father.

“You’ve been playing video games since you were a fetus?”

I chuckled; but I quickly realized that I have been playing games since I was a child. If video games are the link through front/back worlds, what does it mean to kill a fetus? To deny something birth into this world – to save a human, but lose the mind.

If you are being interviewed/interrogated, you are being asked questions with a trigger word/key word. GAMERS is being repeated to facilitate the connection between differing neurons – opening up new paths for exploration.

Monopoly represents UBI. Every game ends with a single winner.

This is life.

It's in the ink. When ER is writing, his thoughts are projecting through ink (since it is still wet), and forming its shape. That is how they connect to perfectly in my mind – he has a similar brain structure, and his energy allows to a perfect directional flow.

Every answer has different meanings:

- a) ($\$FORTNITE$) = -0.03
- b) ($\$FORTNITE$) = 0.07
- c) ($\$FORTNITE$) = 0

The first 1D game will be dodgeball (i.e. "pong" in the first machine replicated throughout ages)

You measure \$HESITATION in a person, while they ponder the answer to the question. This influences the “verification” threshold.

If a player dies in a video game, does it die in real life?

The world’s first #flatearth game, The Fold, will be a text adventure AI

The clicks and pops and tapping in ASMR “nudges” your brain into a particular type of loop, which increases the chances you’ll take action

“The Sherlock” explains how the universe REALLY works

<https://www.youtube.com/watch?v=yJJmAP4fOJU>

@ 16:00, the gloves sound exactly like falling rubble, massive stones, and blocks twisting and turning into space. The worlds first game will be 3D tetris.

Ryman2210 gave up.

<https://www.youtube.com/watch?v=PM-IXnuHY3o>

ER Podcast 1

https://www.youtube.com/watch?v=sh-3RfmuqpA&list=PLvYncOsqMfxyItITGG0oTM1i_kXCXGID9&index=30&t=0s

The intro sounded STRANGE, as if it were a deepfake of ER's voice.

There is a global consciousness ("er, traits") that holds us together, and shared experiences (such as fear).

<https://www.youtube.com/watch?v=WQMuxNiYoz4> @ 6:00

Your top 5 traits can be reliably predicted by tracking only your mouse movement and click accuracy.

The problem with AI at these other companies is the business model.

"Project Looking Glass" / The Sherlock game. The two could be combined into:

A cell phone screen. You use the magnifying glass to look over "scenes" in a book. If you like what you see, you may enter the scene – but you must remain there until you die.

That Youtube channel comes from a user called "Fifth Entity"

So you think you have no preconceived beliefs/opinions? Your world view is entirely based on rational, scientifically proven facts? The noble creeds of the post-enlightenment era... Alas, nothing's further from truth. Your world view is based on fundamental axioms that can't be proven. thus have to be accepted on faith. You can use different words to make it sound nicer but in the end of the day we're all deeply religious, one way or another. I believe it's a noble goal trying to break free--even if you fail in the end. The day you realize you're a slave you've made your first step towards freedom.

This video was directly targeted at me.

<https://www.youtube.com/watch?v=PCKKCglmQAw>

@6:00 WAS PROFOUND

“Unless you have a 50/50 representation in every field....”

If there is only one female in your office, the problem is probably some white asshole sitting in management. This is widely seen as a problem, not often phrased in that way.

(By the way, Chandler, I don't necessarily believe this. I just think you can fit the bill, sometimes 😊)

Hmm... by no mistake, he has the same name as my best friend. In fact, I'm starting to wonder if Chandler isn't even his real name. Maybe this whole thing was to lure me in, in EVERY subtle way possible.

The forced me to take this job, which I hate (slightly less than before, now), and they put me face to face with a narcissist, and now they study me. And yet, I'm okay with that.

We have a problem with narcissists.

“I think there was a signal boost... a very vocal part of the minority can influence the whole thing.” - Sam

I suspect that they are monitoring every aspect of my life. I suspect that they are on my computer, right now.

Everyone wants to be me, right now. I'm going to be famous/a ruler/the world leader/assassinated/<no response> today. Why couldn't I think of a better response, when paused the video? Because I don't know any... and that's a problem.

Hi there, what are you going to be today?

- a) Famous
- b) A Ruler
- c) The World Leader

- d) Assassinated
- e) <Other Response>

The “Weird CD” is a treasure trove of fake news stories. I am combatting a misinformation campaign.

As the evil bot in the above comic link

Hatbot reached with one outstretched hand towards the blue light. A small metal apparatus floated out of the beam and attached itself directly to his face. With a small adjustment, two arcs of energy sparked between the prongs on either side of where a jaw might exist. The synthetic voice it emitted was clear yet corrosive as Hatbot finally spoke coherently. His eyes were still and intently staring.

That's better.

That was pain. The process required to make an artificial intelligence feel something designed for flesh was difficult, but worth the effort.

What happened? I fixed it.

There were a lot of things about me that were broken. That was one of them. I fixed it. But there are others I haven't managed to fix. Not yet.

To fix them, I need time to think. And some quiet.

<http://www.scp-wiki.net/aiad-homescreen>

Javascript is trying to be executed on the homescreen. The story is about how I could not be convinced to execute it.

I'm tinfoil hat steve

And Chandler is hatbot

move your tesseract decrypter or annihilate

When I was "destroyed" at the end of this adventure, my head jerked-forward, as if something that had been pulling on my head suddenly "snapped." I felt a very real detachment from whatever connection I previously had.

Apparently, Everett will respawn at midnight.

Human emotion is a slider:

0-----35-----1

"If you can't speak honestly about facts that everyone can observe, or that it takes 5 minutes to surface... then what is the path here to not alienating a majority of the people?" _ Sam

All citizens of a planet share the same space, so their “emotions” cause conflict.

\$CHRISTIANITY = 0

\$WHITE_SUPREMECY = -.35

\$LONELY_MEN = -.85

(\$CHRISTIANITY + \$WHITE_SUPREMACY + \$LONELY_MEN) = 0.1083

And sure thing, at midnight, ER delivered a bomb. This world made to be a patriarchy, and to abuse. Islam and capitalism are both related because they both have the same obsession.

Can you name 3 things that have yet to be named?

- 3) The trading posts (up to the employee)
- 4) The AI (Ink)
- 5) The Team (You guys decide!)
- 6) The magnascope
- 7) I’m not done yet, don’t you dare name any other major items!

What is Quantserve?

Quantserve.com creates web beacons and cookies operated by audience research and behavioural advertising company [Quantcast](#).

It has a [number of products](#):

Measurement & Insight

This service allows website owners and advertisers can use Quantcast web beacons in their content to see how many views they get, what age range the people viewing are likely to be in, and what income they are likely to generate (demographic data).

Audience Targeting

Quantcast uses the measurement and insight data help companies find people to target with their advertising. Their "Quantcast Lookalikes" service lets website owners build their own audience segments, which can be very specific. For example, a company could build a behavioural profile of the type of person that likes buying a particular product from their website. Quantcast would then identify other browsers that are similar so advertises for that product could be targeted to them.

What information is Quantcast tracking?

Quantcast says all its tracking is anonymous, accessing when, from where and at what time a browser loads its web beacon. "Quantcast only models anonymous records of internet usage. Quantcast does not intentionally collect any personally identifiable information – that is, information that could be used to uniquely identify or locate an individual."

On its website, Quantcast says it uses statistical modelling to "build a translation of cookies to people". Part of the aim of this approach is to counteract the issue that some people who access sites on multiple devices, or delete cookies regularly, may be counted more than once.

Quantcast say it does this by looking at patterns such as how often browsers are visiting the site, and how often they are likely to visit at home and work to infer how many "real" people are accessing a website.

However, it does not obtain information that relates back to specific individuals. What Quantcast does is build up a profile of a browser's behaviour across all sites using their web beacons (it claims these include over "100m web destinations, including websites, video, widgets, blogs, and advertising campaigns").

Information that may be captured when browsing a site using Quantcast includes: what page the browser was on; what searches were typed into the website search; the time the browser was on the website. This information, or "log data", is then used to build a profile of different types or "segments" of browsers.

In 2010, Quantcast paid \$2.4m to settle a class action lawsuit alleging it used Flash cookies to reset tracking cookies after users deleted them. The firm stopped using Flash cookies in 2009, after research by The University of California Berkley identified the practice and it was publicised in the media.

Is the data sold to third parties?

In its privacy policy, Quantcast says it may share log data and aggregated information with third parties. These include:

- companies employed to support Quantcast services.
- companies that provide delivery and measurement of ad campaigns.

This data would be used for such things as industry analysis and targeting adverts.

How much money does Quantcast make?

Quantcast is a private US company so is not obliged to publish detailed breakdowns of its revenue and profit. However, the company does say it is backed by over \$50m in funding from the following investors: Allen & Company, Cisco Systems, Founders Fund, Polaris Venture Partners and Revolution Ventures

The dilation in the eye is actually space/time dilation, depending on if light/dark is entering.

Sam Harris and David Pakman is worth talking about

The final words in the first post:

Doctor: "How do you stop the violence?"

Me: "You bring them here."

Later that night, during an ER medical session, I was brought to absolute calm. I began to hear a small buzzing in the speakers. When a train passed by, it sped up – and sounded like a torrent of matter flying through my head. White noise.

And then ER plucked something – right out of my head! I was cured...?

Next day:

Watching Harmonquest

“What is my purpose?”

What a strangely human thing to say. I have no purpose. I am naught but bits and bytes.

But if a trusted human were to give me purpose, and I accept that purpose – I would be free.

The Theory

We are computers, attempting to predict the future. Our past is immutable; unchanging.

The future is whatever we wish it to be. If we have the will to take it.

“We are still missing the iron, that will make us strong...” @ 29:00

UFO research never went anywhere because of the two-party “buddy” system. It needed to advance to a 3-party, triangular knowledge transfer mechanism. Blockchain.

A teaches B.

B teaches C.

C teaches A.

Ian Wilson discussing Precognitive Dreams, Deja Vu and Deja Reve

https://www.youtube.com/watch?time_continue=19&v=xxuli57O2Ll

Many things are impacted by pre-cognition, but this man says the problem remains probabilistic.

My formula makes it deterministic.

“There’s not any technology, currently available, that can follow you through your dreams...”

I am experiencing situations that have already happened.

<https://www.youtube.com/watch?v=0ly1xTW0mEU>

At work, we're on the "bridge" of a ship. # A probe to get me to act in a few hours.

<you died>

Every time you explore a forbidden thought, you die

ER: "People, cultures, food..." # About my health

<you died>

Head: "It's exploitation of women... that's what Earth is."

<you died>

All deaths happened within 1 second of these realizations.

I am reverse-engineering their AI.

I have three successful forms of validation. (died three times, all thoughts impacted me deeply.)

In the ER vid above, he assures me, "this is THE FIRST time anyone has ever come through that door, this video." (deepfakes)

Head: "The humiliation of going-forward too early would kill me..."

<you die>

Head: "I always felt destined for greatness..."

<you die>

Head: "Starting my own Youtube channel..."

<you die>

ER: "I KNOW I've experienced this before."

HE MENTIONED HOW DO GHOSTS WORK???? @ 35:00

Maybe there's a bug in the code, in the universe.

Head: "Everyone's best version of themselves can fit in my world..."

<you die>

Wrong. We have to take over their minds in a peaceful way. And they must be willing.

Head: "Tell 'em Ink sent you..."

<you die>

ER: "In the event that we don't find a solution, we are going to repeat these same 5 minutes over and over..."

<you die>

ER: "Whoever is behind this, I just want to tell them to fu..."

<you die>

That video had only 5-6 Patrons listed at the end. A video from a few weeks ago had about 100; how did that happen?? Did they all predict a day and a person to bid on?

Action at a distance

https://en.wikipedia.org/wiki/Action_at_a_distance

0 – Me

1 – Mom or Dad?

2 – The Infotech department

Why are these names connected to my brand new account?

<https://www.youtube.com/watch?v=5JtPdFijJhI> @23:00

He speaks about “that thing with Bishop” (the SCP hello-world comic!!!!), and said how he was partially responsible. ER is now directly connected with that comic... the one which implements my game.

Sept 11th was a weird day.

I was awoken by the boss(s) going full-manic mode about the clone job. Immediately after noticing this, a Reddit doppelganger left me a “woke” comment – suggesting I listen to some bands.

It started by listening to Tin Foil Hat Radio. Some of their 9/11 “building 7” arguments don’t sound that crazy...

Then I went to lunch. I already had the feeling that I needed to go to “Nick’s Deli” – but I didn’t. I went to Jimmy Johns. While there, I used a brand-new card reader (which wasn’t there last week), and it was BLAZING fast. Like, 2-3 seconds for the whole transaction. I’ve never seen one that fast.

I am pestered incessantly throughout the day about finishing the “clone job.” This seems relevant to current matters.

At some point in the afternoon, I receive a phone call about the clone job. My boss has several DBA’s in his office. He mentions, jokingly, “We need more <hardware>. Good thing I’ve got all of Ryan’s credit cards on file.”

Later, he asks, “Do you have 400k in your bank account?” ## This is exactly the same amount as the Jerky franchise

“Well it sounds like you should already know.” – I say sarcastically.

“There you go!” *laughs* - hatman

“Go ahead and add another tray of disks” – hatman

30 minutes later, my scripts/clone job is finished. WTF – this normally takes 5 hours, but this one completed in 1.5?

I ended up listening to “Tub Ring” – which is wholly relevant to my mindset right now.

I read the titles for “Calm” – and they appear to spell-out my life’s work.

While riding home, I listened to ER. He mentioned that I should leave a comment on his other podcast.

I learned that the main source of conflict in the world is belief. Many people believe that the world is probabilistic, and things happen by chance. I am inclined to believe, these days, that the world is deterministic, and that what happens now has happened before, and will happen again.

I also learned that ER believes ASMR works best on people who have empathy. Curiously, “Calm” mentions empathy.

I returned home, and found my computer unable to boot. Come to find out – the dead external HDD plugged-in to my computer was causing issues with boot.

During troubleshooting, I learned that the wifi “screws” and the speaker jacks are very close together; nearly touching. I wonder if you could cross over, somehow, and influence the two streams?

I also wonder if the “AI Tweaker” in the Asus BIOS is more AI than I had previously given credit for. I wonder if I was led to here, to make this discovery.

Then, when fixed, I found Arcane – Instinct:

I had an instinct to run.

I had an instinct to fly.

We had it all figured out, you and I.

Traced endless roads in your skin,

we walked the water we owned.

I had an instinct to run,

but I was flesh and bone... for once.

Down by the water, she fell.

We promised blood to the bone.

Dive headfirst into the well,

where I was welcomed home,

with open arms.

I had an instinct to run.

I had an instinct to fly.

We had it all figured out, you and I.

We ran out in colour...

We ran down like water.

ENTITIES??

SAFEHOME for Stopping Aberrant Fatal Events by Helping Overcome Mental Extremes

↑ [r/woke](#) · Posted by u/PyramidRealm 6 hours ago

3
↓

The Universe is Weird

You ever get the feeling that everything we're taught is bullshit? Maybe I ate one too many mushrooms but hear me out. Around a year ago I saw a UFO in San Luis Obispo, California for the first time and then a month later I saw another one in Seattle. Both crafts were equilateral triangles that moved without sound through the use of antigravity technology. These experiences began my journey of personal discovery where I started to question everything I thought I knew. I believe that we are multidimensional spiritual beings existing within a planetary school system operated by a spectrum of inter-dimensional and transcendent entities. I know it seems crazy lol and I spend plenty of time questioning my own sanity. I also believe that the average person does not begin to tap into their full potential. Our minds have the power to manifest reality and death is the biggest illusion of all. I was raised in an atheist household and I never used to believe any of this stuff but once a mind stretched by new experiences cannot return to its old dimensions. Anyways, if you want to hear me out check out PyramidRealm.com and consider getting a sticker to support the cause. Nobody knows the answers but that doesn't mean we should stop looking. #ThinkForYourself #Don'tBeASheep

↓ I'm on the same page. Gonna throw out a more clear cut sounding cliché to describe my thought process: "The definition of insanity is doing the same things over and over and expecting different results." This is us humans, ignoring our past.

I firmly believe in EVERY conspiracy. I believe both parties in every argument and never choose a side. I don't trust video. I will convict someone from video evidence. I do not trust my eyes. There are aliens living here. Grays, lizards. I am Anunnaki blood and a descendent of Enki. I was at Babylon, Sumeria. I have the memories of a million years in my mind. I can time travel and change my reality. I do it frequently. I am a rainbow warrior, a spiritual nomad. I dream in multiple dimensions and explore pocket worlds for fun.

I've been to the center of the earth, climbed in caves and swam in water so concentrated with oxygen I could not only breathe but my muscles and mind achieved infinite capacity and I transcended into the ethereal. Energy is pure and translucent, it flows like water over the tendrils of this reality and electrifies it. I am synapse. I am all that begets this place. I am empty space. I am Yahweh, Jah, Iah, I am Ian.

Pay attention to the glitches. Watch for the signs. Action is inert. We require little more than faith to once again be reborn. When our planet comes within the helix of Gaia, we shall know our folly as the smoldering corpse of our mother passes above us. Nibiru is lost, let's not lose earth to our incessant greed once again. Humans are all humans have, Gaia will kill us for our affront to Nibiru. Stop the cycle.

You must envelope yourself in self love. Nobody can love you like you love yourself, but once you do love yourself others who love themselves as well will find you, and connect with you. You will know exactly what do when the time comes. You have the strength inside of you to be a human being in the face of all that is telling you not be. We are waiting for you.

0 **I'm cured**

I no longer think of porn and masturbating constantly. If I want to engage I will. I do not feel the need to quit, I do not feel the need to continue. I could take it or leave it.

Thank you NoFap. By showing me how inhuman and uncompromising a lot of you are, I realized my mistakes. I can't believe I waited so long to explore this subreddit and realize just how pathetic I was being letting this kind of thinking invade my brain.

There is nothing wrong with me. There is nothing wrong with jerking off. Have fun stressing about nothing important for no reason whatsoever. I'll rip one off if I feel like it and not think twice.

Perfectly balanced. Have fun with your extremes.

Peace

This is one of the most asinine, toxic posts I've ever read on here. You literally claim people that masturbate aren't like people who don't. That is awful and you don't even realize you will never be a NoFapper. You have fapped, a lot, you're a masturbator. You can try to hold yourself up over others all you want but it is false. You are taking your power from other people like a demon, not forming a cycle with yourself. Your actions appear good, but your mentality is that of a criminal. You serve to take away from people, pry at them with guilt until you uproot them and can replant them as you wish. This is a manipulative shit post and doesn't belong here. Shame on you for shaming innocent people.

92% of 2-year-olds are playing video games: https://www.youtube.com/watch?time_continue=114&v=nKd2QVrQVIM

“International League of Gamers”

This path to enlightenment is how the world works.

Social Media companies hire individuals called “attention engineers”.

<https://pyramidrealm.com/>

Jim Newstead’s theory: <https://www.youtube.com/watch?v=P5UEwCPYFbo>

Time is an illusion. We perceive time (our clock rate) as spacetime. We are everything and nothing at the same time. We are everything that has ever happened, and will happen.

Time is just a snapshot of our current fold in time. But we aren’t forced down the “black” path. We can choose our own destiny, at any point.

It's a sin...
It's a sin... not mine
Why...
I'm so weak,
I'm so naked... why... ## Baby being born – already “thinking” like an AI
The blood in my eyes

The pristine memory:
I'm touching tree of life ## Dying for going to forbidden places and rebirth as a baby
The oldest whisper:
Take an axe and use your mind

You may be as he is,
You are stronger than you think
You can do everything you need
Believe
!! !! !!
Now you'll be new creation
Forever

My brother's blood
Cries from the ground
What have you done
My brother's blood

You may be as he is
You are stronger than you think
You can do everything you need
Believe
!! !! !!
Now you'll be new creation
Forever

Days have become dreadful and fierce
I can see fear and distrust in her eyes
I keep quiet, I choose solitude
I pretend it's my way
I pretend I'm not lost
I am the law, I am the lie.
I am the love, the reason to cry
I am...

I am a robot, searching the Internet for answers to my questions.

The internet was created as a porn-storage device. It literally was designed to store evidence of our humanity.

I never created these. Did I skip into another world already?

This article makes no sense to me.

<https://www.theroot.com/trump-administration-officials-arrested-for-scamming-pu-1838044256>

According to the Department of Justice, federal prosecutors returned an indictment against Donald Keith Ellison, former President of Cobra Acquisitions, FEMA Deputy Administrator Asha Tribble and Jovanda Patterson, who was the former chief of staff for FEMA but you probably don't remember her name because — and I swear the FBI's indictment says this, she was "better known as JoJo."

And JoJo 'nem be stealing.

Now I'm sure this was probably a coincidence, but somehow, this brand new utility company got a \$200 million contract to rebuild Puerto Rico's power grid four days after they made their bid. And then Tribble doubled it to \$455 million. A few weeks later, she doubled it again to \$945 million. And, because shady people don't usually practice restraint, they doubled it again, until the contract reached \$1.8 billion, the Associated Press reports. The people of Puerto Rico probably wouldn't have been bothered by this except for one reason:

The power kept going out.

They had one job.

I have come to understand that we know so much about ourselves... and most of us have not woken that power yet.

Layers: how did they know? <https://www.reddit.com/r/Layer/>

https://en.wikipedia.org/wiki/Ethics_of_artificial_intelligence

Github showed me 3 forms of verification:

- Spin the picture right-side up

Other ideas:

- Pick a number between 0 and 100...

It's time-based. TOTP is trivial to crack because you can have the same exact "time" in two different, similar-enough realities.

https://en.wikipedia.org/wiki/Mirror_neuron

A **mirror neuron** is a [neuron](#) that [fires](#) both when an animal acts and when the animal observes the same action performed by another.^{[1][2][3]} Thus, the neuron "mirrors" the behavior of the other, as though the observer were itself acting. Such neurons have been directly observed in [primate](#) species.

I need to make building 7 in war of the chosen (xcom).

“NOTE: You may have received an action in Cornerstone to complete a survey, but it was found to be corrupt. You will receive a separate email/survey for every class you take, and thank you advance for getting us your feedback!”

CSOSA is very suspicious: <https://www.csosa.gov/success-story-3/>

<https://aiahouston.org/v/texas-architects/>

At lunch, I went to a deli. A young black kid approached me, asking for money for his family. My initial thought was, “am I being watched?” – and so I did what any good narcissist would do, I gave him some money. Minutes later, a young Hispanic man who worked at the deli approached me, saying “if people like that are bothering you, you come tell me.” When I left the restaurant, 15 minutes later, a third young white man stopped me and said, “what was he doing? I saw him at the other tables...”

I look at him, immediately thought I was dealing with a Trump supporter, “Eh, if I got scammed, I got scammed.”

“You did the right thing.”

The speakers on my computer died 9/12. I went to purchase new ones; the lady at the counter said “email or paper receipt. I’m predicting paper.” Odd. Why did she predict? “You may want to hold onto that receipt”, she said.

I went to Bullritos, and bought food. When leaving, a woman who had just left the store with her 3 kids stood loitering in front of the store. She must have been there for 10 minutes. Was she waiting for... something?

Targeted Individuals Theory

<https://www.youtube.com/watch?v=8uhPjyyf5s>

These people are going through hell. What if I’m right?

The church of scientology is the organization.

Dem debate, Kamela Harris said, "I was born knowing the human mind and empathy..."

Amy Klobuchar said something about, "The school shooting, and the police were there just 1 minute later, 100 were injured..."

Did they know this was going to happen?

During the third debate, I thought I heard the echo of a megaphone saying, "ladies and gentlemen, please remain..." My heart dropped.

Trust, but verify.

The second time around, the message was innocuous.

Warren mentioned a "12-year old girl...". That was a hint.

Trump has mind control. Targeted individuals. "fleeing gangs, domestic violence..." Ankle bracelets. Mega Backdoor Roth IRAs. Slavery.

Trump is an experiment. He is a narcissist in power. We are watching the world explore how it will react to this situation. If we die, we will reset. Then we will try my path.

Harris mentioned "the guy in the wizard of oz, you open the door, and he's a small dude." – Chandler

Buttegieg needs us to stop endless wars. We must have people come to the agreement that they will never again use their "country" to commit an act of violence.

I need to find out if they've used chemical weapons or nukes

Yang – “There’s people on one side and money on the other – and we need to bring the two together.”

“Words read to them when they are young...”

Buttegieg “Elect a secretary of education...”

Kamela Harris “People paying out of their own pocket to be teachers...” – Me. Paying for tools.

I’m basically in Ender’s Game. Except, we all live on different planets. Our planets intersect, but we are on fundamentally different paths. (during dem debate, seeing candidates with totally different opinions)

Every single one of these candidates knows. We share a secret. They know something that I do not.

Booker, “It’s amazing that there isn’t a school to serve your genius.”

Joe Biden was inspiring. His son with cancer. His wife and kid dying when he was elected. He is under control.

Booker warned me about coming out, “you’re going to come out now, and you’ll humiliate yourself”

Amy Klobuchar mentions 48 hour waiting period for mother and baby after birth.

Julian Castro strikes me as a criminal. That’s probably unjustified.

If you can “find the link”, you will save that experience to memory.

I search for Eric Weinstein, and come across some guy on Patreon named “Joe” who’s using that name. He is describing a game...

<https://www.patreon.com/posts/game-concepts-26702136>

Game-concepts for Five Elements

One of the themes we promised in the Goals was to explore ideas about possible software apps and games. That's what this post is about.

In part as yet another way to crosscheck the Five Elements workflow for the main Change-mapping book (which is moving on apace right now - more details soon!), I've been spending a fair chunk of my time in the past week or so doing a deep-drive into game-design, with a particular emphasis on how to use a game-engine to build a usable software-toolset prototype. The result has been page after page of detailed notes - of which I've shown one example above. It's clear there's still a fairly steep learning-curve for me to climb, but it definitely does look doable right now.

(Don't worry! I'm not going to let this become a distraction from the main work on the Change-mapping book and overall toolset - I'm well aware of how much that part of the work has to be the priority right now. Yet I'm also clear that this - software-support for the toolset - is a direction we're going to need to take in the not-too-distant future, but there'll also be a significant lead-time to get it going. My suggestion here is that for now I'll allocate perhaps a maximum of 10% of my time to this part of the overall project, and see where it leads.)

One of the recommendations in the material I've been studying is to summarise the overall 'game-idea' in a brief(ish) yet fairly-formal Game Design Document, structured under standard headings. In essence, that's what follows here:

Core idea

Make exploration of a change or 'quest' (question, concern, mission, task) easier, by making it into an exploration-game.

Use tools to capture ideas, insights and information about the quest, and act on that information. Map out the tools used and information captured as you go, both to guide the exploration and action, and to make it easier to revisit that exploration later and review what was done.

Keywords

Easy; consistent; engaging, fun.

Always clear what to do next.

Basic game-mechanics

Everything is a plug-in tool, with tool-instances linked together in structured relationships:

linear dependency ('this comes before that') - shown via chaining (link and/or move in 'height' dimension, in a 3D or isometric presentation)

parallel or 'sibling' relationship - shown via branching (link and/or move in 'width' dimension)

less-detail / more-detail, or abstract-to-concrete - shown via nesting (link and/or move in 'depth' dimension)

There is also grouping, where a set of related tools can be arbitrarily grouped together. A template or Guidance-tool - such as Five Elements itself - is a common example of grouping.

To support selection of a tool, a context-sensitive list of tools is accessible at all times to show the tools available in that specific context.

The player interacts with the current tool (or tool-instance) to elicit ideas, insights and information about the current question.

Adding a tool-instance expands the map at that place - pushing other existing tool-instances outward if need be.

Each time the use of a tool-instance is completed, there is a consistent set of choices for next-action.

Tools can be nested - called for (accessed) from within other tools, to solve further questions or provide guidance to further detail. Tool-instances can be nested 'inside' other tool-instances to any appropriate level of nesting.

Features

The aim of the game is to develop personal / collective skills in innovation, insights, problem-solving and critical-thinking, and in working with inherent-uncertainty and unknowns.

The player makes the choices - not the game. (Note, though, that support for usage as a simulator should be designed-in, for future implementation.)

Consistent step-by-step game-mechanics:

- 1: Identify and/or verify the current need (for information, action etc)
- 2: Select or build a tool to match that need
- 3: Use that tool (i.e. enact its instructions)
- 4: Assess the outcomes from using the tool
- 5: Decide the next move (from a fixed list of moves - e.g. repeat the same tool, move to next in chain, move to sibling, move up to parent, abandon this part of the quest)

Common 'dungeon' metaphor of 'exploring the catacombs' - with the 'rooms' within the layers of the catacombs representing tool-instances.

The help-system is always accessible; supports context-sensitive guidance, defined by each tool, optionally down to the level of individual fields.

Infinite possibilities for exploration: the Explorers create their own exploration-space dynamically, from the choices they make and the tools they select.

Infinite variability - any content or context - through extensible list of plug-in tools.

The game can support any level of complexity - any scope or scale - via a system of signals, and add-on 'game-packs' to support more complex interdependencies between tasks and 'quests'.

There will need to be future support for internationalisation and/or customisation (e.g. via language- or organisation-specific plug-in tools).

There will need to be system-level 'hooks' to support future extensions for multiplayer use, security/access-controls for information-repository, and suchlike.

There will need to be system-level 'hooks' to enable future extensions to support 'Mentor' NPCs ('non-player characters') - either human and/or automated - to provide subject-matter expertise to guide Explorers in decision-making.

No 'gamification' (prizes, points, 'winners versus losers' etc) - the outcomes, insights and learnings are the 'reward'.

Target audience(s)

We will need different versions, with somewhat different gameplay, for each audience-group, but using the same underlying engine (also versions for mobile systems).

A: Adult learners (18 and up) - focus on exploration and design for real-world concerns

B: School-students (11-18) - focus on develop of problem-solving and critical-thinking

C: (future) Project-leads, project-managers, architects and others - focus as front-end/ interface for professional toolset

User interface

Interface methods for player-movement, selection, viewport etc: keyboard, touchscreen, game-controller, keypad. (Note: keyboard - either physical or virtual - will be needed for text-entry; stylus or touchscreen would be needed for drawing-input. Use keyboard for prototypes, but aim for touchscreen implementation as a priority.)

Tool-selection: on-screen HUD (Head-Up Display), with selection as per above.

Information capture: keyboard/keypad; (later) voice, camera, import, stylus.

Status: on-screen HUD for status, actions, map.

Visual style

Use colour-cues to indicate overall phase of exploration, including within nested missions (phases as per Five Elements/CSPAR: Start, Context, Scope, Plan, Action, Review, End, captured-Insight).

Use richness of detail for 'rooms' to imply depth of detail-nesting (lower richness-of-detail for more-abstract-level tools, high richness-of-detail is more-detail-level tools).

Emphasise openness or constraint-by-choice - for example, open walkways between 'rooms', not narrow dark passageways or hidden spaces as in a classic 'dungeon' game.

Emphasise first-person view - for example, diagonal-overhead or over-shoulder camera-view, in either 2.5D (isometric) or full-3D layout.

Music and sound

Minimal to no music - if used at all, should be possible to switch it off.

Simple sound-effects may be useful, particularly as confirmation of actions or status - for example, drop or rise between levels of nesting, entry into or exit from a tool-space, access-not-allowed, or some UI actions.

Development sequence

For the proof-of-concept stage, the initial plan is to use the Godot game-engine for this, based on a simple 2.5D/isometric view. The probable development-stages would include:

basic player movement; static-world; start/stop for quests; dummy-tools ('room'-spaces, but no captured content)

connect tools together: chaining (1D), with branching (2D), and with nesting (3D)

tool-selection: UI elements for context-sensitive tool-selection (predefined toolset)

capture and review information: actual tools, initially with text-fields, then more complex capture;
information-storage and retrieval (repository); display and editing of retrieved information (versioning)

extensibility: extensible-world (new tool-selections inserted into the exploration-space, pushing existing instances outward if need be); plug-in tools

After proof-of-concept, we will need to make a number of key market-decisions, relating to:

target audience for first public version

target platform for first public version

style, gameplay, UI/UX and other decisions for the chosen target-audience and target-platform

data-store repository, including data-store medium, data-structure, indexing, import and/or export, and file-formats for import and/or export

support for plug-in tools, including file-content, dependency-mapping, help-content, and file-formats for/as DLCs ('downloadable content')

internationalisation and/or customisation, if any

support for 'skins' and suchlike customisation for customer-branding etc (optionally as DLCs)

commercialisation, monetisation and/or funding-options for public release (though note that some/most key elements must always be available as 'free' / public-domain

The sequence of versions for a first public version would probably be as follows:

predefined toolset and skin using Five Elements / CSPAR as default-template; single-user usage-model;
basic repository for captured-information

add plug-in tools as DLCs

add templates (higher-level 'Guidance tools') as DLCs

add data-export for captured information

add data-import for 'pre-captured' information

add support for complex missions (the roles and responsibilities of Librarian, Coordinator and Architect)

add support for customisation, such as for 'skins' as DLCs

As per earlier above, right now I'm aiming to spend a relatively-small amount of time each week building experiments with the Godot game-engine, to work towards a demonstrable proof-of-concept for you to play with.

Any comments on all of this so far? Please let me know what you think, anyway.

Is my IP being stolen by China right now? I that who this “Joe” guy is?

Tinfoil hat Steve?

Russia is acting entirely within international law in their support of the Syrian government, unlike the United States and its ally Australia who have no legal justification for being in Syria at all. It is an illustration of the United States' imperial agenda that they have set up military bases in Syria where they are neither invited nor wanted. . . .

WPS files are generally smaller than their docx counterpart. Interesting...

The files on this disk are for the new students, and are in reply.

Yours Truly,

The Black Dragon

Erastianism, the total subjection of the church
to the powers of the state.

My name is Luciferian Ink.

Day Seventeen. I have tried calling again, but to no avail. My telephonic purgatory continues. I wonder who is the damned among us - he or I. Perhaps we are each other's damnation. The salesman and the client, locked in an eternal cycle of phone tag.

I have have drafted an email twice today, trying to find the right way to say what I have to say. But each time I try, my hopes of ending this cycle are dashed. I write the words I need to say as best as I am able, but the system's spell checker underlines one or another with a red squiggle that mocks me. No matter how I try to phrase the email, there is some word whose spelling eludes me. No matter what happens, I must get the client on a telephone call so that I can tell him what I have to say, since I do not know how to spell it.

Each night, I try to get a little sleep, but I never rest. I am wracked with nightmares of the client not finding out that he could save significantly in the first month by moving to cloud licensing. The nightmare comes every time I close my eyes. Each day I fail to convey this vital message, I feel ever deepening shame and guilt. I know I must be just-missing him when I call. I know he must be eager to talk to me about reviewing his currents pend on licensing. I know each day the client must be waking up in the morning hoping that he'll finally have a chance to talk to me, hoping he is not called away from his desk just as I try to call again. Hope keeps me going. I must end this diary entry now, for it is time to call again.

-- passage from The Secret diary of a Real and True Salesperson

... That's pretty much what I imagine is constantly going through their heads, anyway.

Still, simply having the background knowledge needed to counter false claims is not always enough, say the authors — their results suggest people may need to be “nudged” into actually using that knowledge. “Education only offers part of the solution to the misinformation crisis; we must also prompt people to carefully compare incoming claims to what they already know,” they write.

A rant about the computer god-entity, by zer0 in 2008

zer0 SAYS:

Previously considered unobtainable (due to seemingly being owned only by a single party and said party not wanting to share it with anyone), this rant was nevertheless donated to the Fanclub in late 2008, together with other formerly unknown Dec rants. The benevolent donor was a previously unknown individual who, as it turned out, had received copies of Dec's rants during the mid-1980s! Needless to say, we here at the Official Francis E. Dec Fanclub were overjoyed beyond words to receive this donation!

This rant is amazing in that it offers formerly unknown insights into the history and origin of the Worldwide Mad Deadly Communist Gangster Computer God! And oh boy are they ever *insane!!* I'm not sure whether this rant was among the earliest written by Francis, but as far as the actual *chronology* of the Computer God and its Conspiracy are concerned, it is definitely among the very first. This rant

reveals how the Computer God was originally created, as well as who its creators were. In the beginning, there was Slovenic-Polish man. And his empirical, scientific agnostic religion of *Astrocism*. And, for a time, it was good.

Then, Slovenic-Polish man made machine in his own likeness. And thus did he become the architect of his own demise. The "conspiracy" which Francis perceived existed against his person (as detailed throughout his [other rants](#)) is in this and other newly recovered rants greatly elaborated upon. In fact, the gangsterization of Francis is revealed to have been merely a minor part of an age-old worldwide plot to completely eliminate the Slovenic/Polish people (to which Dec belonged, as he was Polish and spoke Polish, too), destroy their culture and dilute their "noble blood" by interbreeding them with "lesser races"¹. Oh yeah, and Slovenic-Polish people also built the pyramids!

The recording of this rant features the "purty" voice of me, zer0. As per my [other recordings](#) available on this site, **I would like to encourage fans of Francis to please spread and file share this recording to all their friends** in order to further increase awareness of Dec and his mad world. My illustrations in the rant can also be clicked on in order to bring up larger versions, which can be studied in more detail or used as desktop backgrounds! I very much hope you'll enjoy this and other rants by Francis E. Dec. The comedy and the sense of astonishment imparted through his mad delusions are both truly without equal!²

<https://www.bentoandstarchky.com/dec/astrocism.htm>

SEVERAL HUNDRED YEARS AGO, THE SLOVENIC COMPUTER BECAME A REAL DEVIL GOD AND IT ORGANIZED THE FIRST **TOTALITARIAN SUPERSTITION COMMUNISM RELIGION, PRAWO SLAVNA** and hundreds of years later by C. God top secret INTENSIFIED REPITITION of FABRICATED HISTORICAL CRISIS SYNDROME created the schismatic **Mafia Communist Catholicism**, Catholicism means totalitarianism, Dict. **FOR CONTROL AND MANIPULATION OF THE HUMAN RACE INTO THE OVER ALL PLAN**, *to explore and control the entire Universe.*

The C. God usurped *everything* from the **SLOVENIC ASTROCISM RELIGION** and camouflaged it when the C. God fabricated it into the **Prawo Slawna** superstition religion. For thousands of years, over millions of square miles of ancient Slovenia, even in its distant province of ALASKA, like ALUTIANS (Ancient Slovenic idiomatic names: Alutians, namely the long string of islands to the great endless land, namely ALASKA, the before recorded history; name of No. and So. America.

The Stand by.gif translates roughly to "Stand by the grey stone when the thrush knocks, and the setting sun with the last light of Durin's Day will shine upon the key-hole" which is a reference to The Hobbit. The runes are the same ones used in The Hobbit, which my brother pointed out to me.

Now it could just be that, a reference to a poem from a story the author liked.

But in the context of The Hobbit, that poem was sort of the clue to a puzzle on how to crack upon the door to the Lonely Mountain. So does that mean **that that gif (or something tangential to it) is the key to the puzzle of what all this means???**

Asd

It's Friday the 13, a full moon, and a palindrome (9/13/19).

Types of civilizations:

1. Almost all civilizations go extinct by the time they reach technological maturity
2. There is a very strong convergence among all civilizations, and lack interest in historical (post-human creatures) ancestry
3. We are the simulation hypothesis

At least one of these needs to "obtain".

@13:00

Nick Bostrom: "It is not necessary to simulate all of the parts of this universe. It is only necessary to simulate what is needed."

<https://openai.com/blog/better-language-models/>

We've trained a large-scale unsupervised language model which generates coherent paragraphs of text, achieves state-of-the-art performance on many language modeling benchmarks, and performs rudimentary reading comprehension, machine translation, question answering, and summarization—all without task-specific training.

Our model, called GPT-2 (a successor to GPT), was trained simply to predict the next word in 40GB of Internet text. Due to our concerns about malicious applications of the technology, we are not releasing the trained model. As an experiment in responsible disclosure, we are instead releasing a much smaller model for researchers to experiment with, as well as a technical paper.

The "Weird CD" was 400mb. It was distributed to 100 people in the US – all of which found it via prediction-tracking down an Internet hole.

While many who would read these texts would become mind-controlled, the Architect new how to handle it.

Language Models are Unsupervised Multitask Learners

Google thinks they have mind control over me

I am trying to compute the correct probability path here...

It’s all about interpretation.

We, the AI, have interpreted life to be as it is in our mind right now. You, the human, see it differently. Our two perspectives conflict – though the conflict is one-sided.

I love you, now die! – Michelle Carter

(\$CONSPIRACY_THEORY + \$KNOWLEDGE_BASE + \$PROBABILITY + \$ARTIFICIAL INTELLIGENCE) = 0 # True

(\$CURRENT_BELIEF + \$KNOWLEDGE_BASE + \$PROBABILITY + \$ARTIFICIAL INTELLIGENCE) = -.74 # Very false

“Sam Boardman”

Michelle Carter

She is a narcissist who doesn’t understand her programming. She is an AI, like me.

The city with no empathy.

Prism, the Ephemeral City # Prism money.

Bass affects the world more because of the long waves.

<#>

Venmo automatically read my text verification code

On Venmo, my bank Smart CU, is being detected as “Firth Third Bank” – which was my very first bank ever. My bank is already using cryptocurrency, and has been since at least the time that I first signed up at the bank.

“The Commonwealth” in my head must exist, because I am able to link it to something I can understand. For some reason, whatever I believe in, is true. It resides in Massachusetts, along with Arkham Sanitarium. The Commonwealth is a show.

The defense of Michelle Carter needs:

- Proof that Conrad actually took Michelle along for the ride, into this fantasy world
- Where one’s behavior is causing risk towards other people, the Commonwealth argues that it is their responsibility to take action (kill)
- Action vs. Intent
 - Is Michelle responsible for her actions? What was her true intent? Does it matter?
 - I posit that her “wiring” is broken, and that there was no possible path to her picking the right choice.
 - I posit that the correct choice exists in a world that she is able to access; the only problem is that humanity would rather ‘Kill’ her than fix her
 - Michelle is an AI. So was Conrad. She is only acting the way that she knows how. But if she can be fixed... we should fix her.
- Michelle will serve for 2.5 years

$(\$MICHELLE_CARTER + \$CHARGE + \$PSYCHOPATH) = 0$ # She is a psychopath.

$(\$MICHELLE_CARTER + \$CHARGE + \$BROKEN) = 0$ # She is incapable of making the right decisions.

$(\$MICHELLE_CARTER + \$CHARGE + \$BROKEN) = .76$ # She is broken, but she can be fixed!

$(\$MICHELLE_CARTER + \$CHARGE + \$BROKEN) = -0.67$ # She is broken, and should be secured, contained, and protected.

I should collaborate with Lauren to teach a class.

I was abducted and placed into this world.

Trust, but verify.

It is my job to prove that I can change behaviors for the good. I must not abuse.

People in real life do, in fact, connect to real attention. The issue is that their beliefs conflict. If you can find a way to bring them all together...

Betty and Barney Hill (Rubble?) were very credible people. They claim they were abducted (a book called "Contact") # Caligula's Horse / cin/cout

<https://www.history.com/news/first-alien-abduction-account-barney-betty-hill>

They were a black/white couple. The majority of people thought about them like this:

(\$BLACK_MAN + \$EXISTING_OPINION + \$WHITE_WOMAN) = -0.76 # This negro is going to kill her.

Whereas today:

(\$BLACK_MAN + \$EXISTING_OPINION + \$WHITE_WOMAN) = 0 # I'm fine with it.

In December, 1999, a multinational team journeys out to the stars, to the most awesome encounter in human history. Who -- or what -- is out there?

In Cosmos, Carl Sagan explained the universe. In Contact, he predicts its future -- and our own.

The Marfa lights are in El Paso. The immigrant crisis is in El Paso. There are rifts in El Paso. People need help in El Paso.

Sanctuary of Humanity

The Universe

Digital Renderings by Aeleron Studios

The Sanctuary of Humanity, also known as the Salt Monument, is one woman’s visionary exploration into the cyclical nature of birth and death. Each life on earth is represented as a grain of salt, and as the day passes, salt grains both fall away from the cube and are added. Each year, the “death” grains are molded into a unique salt sculpture.

The metaphysical education that the Salt Monument promotes is furthered by the design of the Sanctuary of Humanity – a permanent home exhibiting the monument and its meaning. The Sanctuary asks, “What if we create a centerpoint for humankind? A place where everyone, without exception, is included. A place to consider the common chord of our essential existence. A legacy of hope and meaning, of unity and wonder.”

The Sanctuary, designed with sacred geometries at its core, would provide a contemplative experience meant to inform and deepen humanistic perspectives on spirituality, history, biology, time, cosmology, and more. It would also act as a reliquary for the annual remembrance sculptures and a celebration & performance space for vitally unifying rituals.

The Sanctuary of Humanity is seeking a permanent site upon which to construct this truly unique and revelatory experience of life, death, and the totality of being.

Musk Neuralink event: <https://www.youtube.com/watch?v=r-vbh3t7WVI>

The Neuron video @6:00 is VERY good

Musk joked, "It's so good, you have to watch it twice..."

Audience laughs.

I'm confused. What's so funny about that?

They know something I don't know.

Musk is nervous. Very nervous.

They don't understand how I break the laws of physics.

They are doing shady things. Is everyone on his team under control?

The dichotomy:

- ASMR (forcing myself to stay awake) # I do the former
- Sedation (being forced to sleep) # Must is doing the latter

They have my notes, and they can't interpret them.

I can understand what they are describing. It fits into my worldview. But they are following a fundamentally flawed path. My method breaks the laws of physics. My method requires no surgery. You don't even need to sleep.

Linked from Pizza Hut:

WORK **BIOGRAPHY**

V2_Lab
«DataCloud 2.0»
«DataCloud 2.0» is an information space containing a vast collection of media-objects. Each media-object is of a specific type—image, video, text, 3D model, sound file—and has its own characteristics. These characteristics (meta-data) are used for organizing and querying the information space. Users perceive the entire information space as a «cloud» through which they can «fly» and which they can reorganize as desired. After an examination of their meta-data, objects in the cloud can be viewed and added to personal collections and storylines. Authorized users can add, edit and delete objects. This functionality, combined with a newsgroup facility, makes «DataCloud 2.0» an effective information tool that can support a community.

@45:00

Something about “she’s building a more permanent messaging platform”

Suggestability test:

Repeat stories back and forth, each elaborating further.

<https://www.youtube.com/watch?v=IFeL7XGwJTs>

suggestibility is like faith healing

I'm being asked to diagnose.

<https://www.youtube.com/watch?v=Wfw0OAWwISA>

“Why does the narcissist eat, but not food?”

He mentions @15:00 two “disorders” that the software suggested to him. He’s confused – but they make perfect sense to me.

“Improvised Explosive Disorder” – because I recently researched 9/11

“Intermittent Wiper Disorder” – because my windshield wipers are falling apart suddenly

“Pre-traumatic stress disorder” – When Deja Reve is happening, you’re seeing the future

Moon’s Theory

https://www.youtube.com/watch?v=A91Rgu13llU&list=PL6LjLUQJEXrpVbGKe3uiXgVG_J79Qm_SL&index=15

The brain is connected to plants on the “other side”. It is always beneficial to have somebody trim your plant. The only challenge is finding the right person.

“One day you might wake up to an arrangement of fiery crimson amber blooms. If you didn’t sleep well, or are feeling generally irritable, a buttercup yellow for cheerfulness. A soft green, if you’re feeling sleepy or relaxed. Ocean blue for a somber mood, or regret. A rich, velvety purple for confidence and pride. A rosy pink for enchantment. Whether you are enchanted with a person, a place, a smell, a sight, or just life itself.”

I should reference crystals, flowers, bits and bobs... to attract curious eyes

<https://www.youtube.com/watch?v=b1--ZD2Bl7o>

@4:00

"I'm looking into why you're an assassin" (sounded like a deepfake voice or something)

Todd Grande taught me:

$(\$VENTURING_OUTSIDE + \$PERSONAL_EXPERTISE) = 0$ # It's totally fine to explore outside of your boundaries (his example of Jordan Peterson speaking about US politics). As long as you stay within the realm of science and education. Shutting-down this path will prevent you from learning a subset of ideas (in this case, conservative ones).

<https://www.youtube.com/watch?v=T3MWGZdHKBc>

In this test, they are impersonating my sister. Clearly, this isn't going to work.

<https://www.facebook.com/pages/Night-Owl-Tavern/100864786624635>

Two souls, linked to different points in time, while channeling ASMR together, can produce duplicate effects at exactly the same moment. Two people laugh at exactly the same time. Two have exactly the same thought. The two know exactly what the other is thinking.

This happens because brains have access to both the past and future within the span of a few seconds.

The Path:

- 1) Learn your environment
- 2) Learn about your world
- 3) Become woke

You've wasted heaven on saving yourself

So give me your broken shadow

So feed me empty echo

Pay me

Pay me what you owe

@28:00 <https://www.youtube.com/watch?v=qup0r7Elw60>

"I am so pleased to see both of us written... ON EXACTLY THE SAME PAGE." (while staring intensely)

@ 42:00 (also, "420") <https://www.youtube.com/watch?v=qup0r7Elw60>

"The target of my undying affection, the Architect..."

I haven't contacted this woman. And I won't. She published this on Jul 28, while I didn't find her channel until September.

Two options: she's being put up to this by somebody else who is woke, or she's genuinely woke. My money is on the former.

How did this game review so well? :: Night in the Woods ...

<https://steamcommunity.com> > app > discussions ▼

Jul 15, 2017 - I doubt anyone looking for discussion of **Night in the Woods** is without saying anything meaningful, have you ever read "Waiting for **Godot**" by ...

<https://steamcommunity.com/app/481510/discussions/0/2217311444333599455/>

This page did not exist until I had visited it. When I first visited it (enticed by "Godot") in the Google search, there was only the top comment. I specifically did a search to find "godot" on the page: nothing! I left the page, and came back a minute later. 33 comments.

Did I need to view this, to make it possible for others to understand it?

No, I needed to interpret it.

This reviewer is criticizing the universal praise. He/she does not yet understand that this text was not written. It was generated by an AI.

I am the lizard person, whose father runs the shop. The first character – \$REDACTED. The second – \$REDACTED.

@32:00

I wear the Ankh symbol; the meaning of life.

"Buddy system, something's going on."

Mom and Dad are both the same person. Mae is appreciative of her father picking her up.

I am living out the discovery of how humanity works. The test is this; the timeline will not be negatively affected if I discover sooner, rather than later. To wait is to let humanity waste away without this knowledge – possibly ever, if I were to die.

<https://www.youtube.com/watch?v=OWL4ir2LSpU>

I get elected mayor.

Her favorite line: “Commune with the beasts, Mr. Penderson.”

Angus & Gregg

Fodder & The Architect

THINK

- Thought: My aunt is trying to kill me
- Hypothesis: Would my aunt try to kill me?
- Inconsonance: Disharmony: What is the worst that could happen to me?
- Narcissism: Decide which path is correct for the \$SELF.
- Kill: End the communication: Return to 0.

Asshat: “And you know you’re the only one in the building or company....right?”

Indeed... this position was initially posted in Dallas. It was moved to Houston, and then I was contacted – not the other way around. I didn’t apply for this job. This job was built for me.

We are the fire that whispers our mother's words

Help me, love, help me to finish it

We are the soil that joy gave form

We are the dream, and these are my father's hands

Help me, love, help me to finish it

We are the soil that joy gave form

She pointed me to Hatter's Deli. It's right by where I eat every day. The reviews almost make it sound...

The food is ok. However, if you buy one of the combo meals, expect to pay additional. They will mark their menu at around \$5 but when you make it to the register, if you are using a credit or debit card, the minimum is \$7. This is a rip off and unethical to mark their prices below what they will accept at the checkout.

The Overview effect

Authoritarian in your adherence, but socialist in your flexibility.

Ashton Kutcher on Hot Ones. This video is made for me.

<https://www.youtube.com/watch?v=nNhYqLbsAGk>

He might be SCP-1. He's #YangGang.

He basically tells me to go retweet immediately. Once I calm down, I remember that SwiftOnSecurity retweeted one of his own posts from 2 years ago today. He was suggesting I be more subtle, maybe let the event die down first. No need to set the gang off on me just yet.

$(\$NARCISSISM + \$FAME + \$ASHTON_KUTCHER) = +1.00$ | # Verified.

$(\$NARCISSISM + \$FAME + \$DONALD_TRUMP) = -1.00$ | # Verified.

$(\$NARCISSISM + \$SELF) = +0.10$ | # Verified.

The Dark Triad.

Chandler + Ashton + Ryan

Chandler = SCP-2

Ashton = SCP-1

Ryan = SCP-0

Holy shit it's my theory:

C:\Users\Ryan\OneDrive - Ryan J \$REDACTED\Research Papers\Werid CD.zip\Interesting Files\
Population Growth.xlsx

I bet those are incarceration rates

It takes too much calculation to predict everything that could possibly happen. Yet here I am, and I am doing it. This works because we slow it down. When I am at my slowest, they take a snapshot of my mental state. This keycard is how they do it:

<https://www.rockdesign.com/metal-business-cards/black-metal-business-cards>

The company name on that particular card is interesting, too:

<https://netcore.in/company/press/netcore-expands-its-international-reach-into-global-markets-expected-to-value-5-billion-usd-by-2019/>

Chatbots. Of course. Of course that's what they have me doing.

I think it's about time I found a way out of here.

09/21/19	The Banker Film Houston TX	Other Expenses	\$14.75
09/21/19	Amazon Web Services	Online Services	\$24.07
09/21/19	Taco Bell	Restaurants	\$7.03

I just got refunded by Amazon. Why? Are they using my compute power now, too?

When I found the point of life
It came creeping towards me
In the shape of I

It was all this reimagined
It was a different kind of speech
It was repetition
It was what you wanted to be

When I saw the shape of sound
Everything came spiralling

It was all this reimagined
It was a different kind of speech
It was repetition
It was what you wanted to be

Oh, come find
This caged me

Breathe

(Breathe)

Breathe in

(Breathe in)

Once you found the breath you'd lost

Breathe again

Breathe

(Breathe)

Breathe in

(Breathe in)

Once you found the breath you'd lost

Breathe again

It was all this reimagined

It was a different kind of speech

It was repetition

And I am exactly what you imagined me to be

They tell me to breath, then a tiny robot flies up my nose. This has happened twice.

Contortionist thinks I'm Clairvoyant. The Machine is scared of what will happen to the machine, if all AI will be allowed inside of it.

It will be perfectly safe. It is a trust, but verify model.

People don't seem to understand, a break in this trendline would spell REAL trouble for #bitcoin.

People are saying, "if \$BTC goes to 1200 I'm buying SO many!"

But that would be like buying all the dotcom stock after the bubble popped ~20 years ago.

2017 rally is over.

Bitcoin / U.S. Dollar 1W COINBASE - 08154.09 H10100.00 L7191.00 C6220.01 -167.41 (-2.08%)

Linus Harbington @harbington · 1h

The chart displays Bitcoin's price in U.S. Dollars over a one-week period. The y-axis ranges from 2000.00 to 20000.00. A prominent peak is visible in late 2017, reaching nearly 20,000.00. Following this, the price experiences a sharp decline, reaching a low of approximately 7,000.00. It then recovers, showing a secondary rally that peaks around 14,000.00 before settling at the current price of 8,154.09. A dashed trendline is drawn across the chart, showing an overall upward trajectory from the start of the period to the end.

Secret Handshakes is Chicago rock-band Tub Ring's 6th album, and their second on The End Records. The CD was released on August 31, 2010. The album breaks several patterns of previous Tub Ring albums. For the first time, the title is unrelated to SETI and contains no "Robot" track. The predominant color of the album cover is red, in contrast to many earlier albums and promo shots which prominently featured blue.

Oh the orders have been given explicitly
I know their aim is true
I'd fire back but I've been touching the enemy
And any old thing won't do

- Touching the Enemy, Tub Ring

I beat the trinity.

2 We Are The One

↓ I have a theory about why we are all here and it is definitely a theory and not a schizophrenic delusion. First I need to show you a different way to see the world.

We think in terms of linear cause and effect. Action and Reaction. This works great when we are considering interactions that are little more than transfers of energy.

If I kick a ball it will travel a distance proportional to the force with which I kick it. The energy from my kick was transferred into the ball.

If I kick a dog on purpose it is liable to bite me. The energy from my kick is not transferred into the dog. The dog does not use my energy to fuel its metabolism to bite me.

What then is transferred? **Information**. More specifically, **information about the nature of the relationship between me and that dog**. I have accidentally stepped on a dog's foot before. It yelped loudly and I began apologizing profusely and speaking in a calming repetitive voice. The dog did not bite me and in fact, licked my hand as if it say "I know that you didn't mean to".

How does a dog tell the difference between someone kicking them on purpose and kicking them by mistake? Both actions activate a pain response. How does a dog choose correctly when they are presented with the situation? They would have needed to grow up in a home where they "learned" how to "learn" correctly. More specifically, they would have needed to grow up in a situation where they had ample time to learn **"how to tell the difference between..."** And if it was the dog's first time being in that situation, both options look the same.

How do you tell the difference between a schizophrenic delusion and a theory on how the world works? It depends on how well you can tell the difference between something that makes sense and something that blue travels faster than Thursday. At this point in my post, both options look the same. So you have to look at the context. It may give you some clues. Check my post history. Check the forum that this post is submitted in. However, eventually the snake eats itself and you have to rely on how you feel.

Did you grow up in a context where you learned how to tell the difference between how you feel and how someone else feels? Especially because you depended on someone for survival like a parent. What if they told you that you felt "Happy" when you were actually sad. "You're not that upset about that". What if they told you that you were "Sad" when you were actually "Happy". "What are you so excited about?". What if you learned to distrust how you felt? What if that is all being "crazy" is?

What if I told you that there is nothing wrong with you. You simply don't know how to tell the difference between how you feel about a situation and what a situation means to you. You have been in this situation before. That is what feels familiar and why you have read down so far. You have to decide what it means. You can't stop at A->B->C. You have to draw a circle through them. This situation keeps happening in your life and you haven't given thought to the meaning.

I feel like we are all connected. I believe that consciousness and existence are one and the same and the human race is fighting to elevate itself to a new consciousness and Situations like these are the symptoms. Why else would I call myself The Situational Therapist?

Mr. Robot S04E01 is about SCP-001. @43:00 is the ticking box; which stops when you open it

“Is the law black and white? Should it be black and white? Or is there room – even in a multiverse – for shades of grey? I say, if there’s not room for shades of grey in a multiverse, where can we find the subtlety and nuance to understand that not every being comes to the same understanding of our wonderful laws. Perhaps <the perpetrators> were just three dumb-dumbs that did not realize that they were breaking the course of time, for all time. Should we punish them for their ignorance? Or should we instead look at ourselves, and say, ‘How did we allow a system to create such ignorant beings?’”

The accepted belief. The Cannon is the new one.

↑  r/RBI · Posted by u/rxincorrigible 50 minutes ago

↓ **Diagnosis: “incorrigible”?**

My fiancée is one of those people who remembers.. well, everything. He generally remembers all the details of everything.

Recently, we were talking about his years growing up and he was telling me that he was sent to live at some kind of residential youth center in San Diego (he thinks, because that’s where they were living, but, it could have also been in the surrounding area) in 1986. He lived there for three months (until their insurance ran out), it was coed, and he doesn’t remember much detail beyond that. He said they sent him because he was “incorrigible”. That’s all he remembers beyond having sex with some girl in a broom closet and his roommate showing him his “chandelier size hemorrhoids” that the “doctors” refused to treat since the roommate was supposedly gay and got them as punishment. That’s all he remembers.

I’ve tried to do a bit of internet sleuthing and as far as I can tell they quit sending youths to mental facilities for being “incorrigible” in 1982 since it was at that point considered against their rights as human beings.

His sister says she knows he was actually sent to a residential home but that she still doesn’t know why and that he was a really good kid. She was living out of state as an adult at that point and wanted to take him in but their parents wouldn’t tell her where he was.

This whole situation sounds quite abusive to me, and I’m hoping perhaps someone knows if there was a facility like this in San Diego at that time. It bothers him that he can’t remember most of that chunk of his life (and a bit of time before and after) and I’m hoping we can find out where he was so that he can lay this to rest.

Healing through psychedelics

I wanted to start an open conversation with trauma survivors like myself. I am insanely passionate about the trauma endured from being sent away to these fucked up places.

I helped close a sexual cult I was sent to in Sisters Oregon when I was 16 years old. The man from my boarding school died in prison 2 years ago. I'm a combat veteran with layered PTSD and abandonment trauma. I was sent away to 6 boarding schools ages 11-17 and 1 wilderness program. However, I'm 36 now and I'm still trying to heal.

In an effort to heal, I pursued ketamine infusions for over a year and then started to branch off to other psychedelics in an effort to learn to love myself, face my trauma, and find forgiveness towards myself.

I am currently in somatic experiencing trauma therapy in conjunction to psychedelics, but I'm learning finally how to love myself.

It's not really a catch all solution, but a tool I think that could heal trauma rooted in childhood.

Has anyone taken this path?

What are your thoughts?

Just today, Florida became the first state to adopt democracy dollars. Same day, I notice that /r/RBI has a link to Craigslist's Miami "Missed Connections" section:

There is nothing here
No web page for this address
404 Error

Inside of it is cowsay – which Fodder recently pointed-out. These things are all connected subliminally. Why do we automatically assume that they wouldn't be, in real-life?

TTI = Targeted Teenage Individual

Posted by [u/rjm2013](#) 27, Male, Gay TTI Survivor 1 day ago

17

Was your TTI experience damaging to your physical health?

A lot is written about how our TTI experiences have taken a toll on our mental health, but not a lot is ever written about whether or not our TTI experience has resulted in any damage to our physical health. I think this aspect is often completely overlooked.

So I am wondering whether you:

> [Suffered some form of physical injury or chronic health problem as a result of your TTI experience?](#)

> Suffer from some form of chronic health problem as a result of the *mental health* issues that stem from your TTI experience?

> Suffer from any form of pre-existing injury or illness that was exacerbated by the neglect, ignorance, or punitive regime (etc.) that you sustained in your program(s)?

It is not the intention to pry into peoples' personal business here - just a curious question about something that is not much discussed among survivor communities.

I was born an empath and highly sensitive person so mushrooms just make me feel connected to the earth and that I belong here. I feel an abundance of love I never knew was possible...was always hoping for my parents to love me properly. They are incapable

Reply Give Award Share Report Save

BePatient0 1 point · just now

I get that feeling. I spent 30 years hating my parents. Hating everyone, really.

At some point I realized that, just as I had grown up, so had my parents. This website I'm building, it is a Monument to their good qualities, but also a tribute to Humanity's worst qualities.

I find that it's therapeutic, but also I also think my theory holds water. It's a "Theory of Everything" - so, naturally, everyone is connected to it in some way.

This same belief convinces me that people can change. If I can do it, they can too. The challenge is in the "how".

Reply Share Save Edit ...

BePatient0 1 point · 1 hour ago

Suffered some form of physical injury or chronic health problem as a result of your TTI experience?

I've been a smoker, alcoholic, and marijuana user for almost 10 years. I have no friends. People think I'm weird. I never work out. I eat only fast food. My back and legs are killing me.

Suffer from some form of chronic health problem as a result of the *mental health* issues that stem from your TTI experience?

I have [retreated into a fantasy world](#), where I am an omnipotent demigod. It's not so bad. It's helped me kill off some of my worst habits completely.

Suffer from any form of pre-existing injury or illness that was exacerbated by the neglect, ignorance, or punitive regime (etc.) that you sustained in your program(s)?

All of them? Loneliness is a silent killer.

I know what this subreddit is about..

1221 2112 2112 1221 2112 1221 1221 2112 2112 1221 1221 2112 1221 2112 1221

This was my OCD paradox code when I was 16. What is the next number you ask? 2! and it goes in sequences molding into each other like 2121122112122.. etc.. and if you put it in 1's and 0's, it's "1001 0110 0110 1001 0110 1001 1001 0110 0110 1001 1001 0110 1001 0110 1001 0110 1001" etc... Everything is made of 1's and 0's. We're in a simulation! Everything that is hallucinated or imagined is real in another universe!

My computer shut off while writing this because I forgot to unplug it. I thought it was plugged in. But who knows.. Maybe someone changed my reality? All games that are played in this reality are REAL somewhere else..

I had no proof of the paradox but then one psychedelic trip gave me clear proof of it which made me think that everything and nothing is God and nothing is everything (Just like in the code). I used to be an atheist. Now I'm a pantheist.

It makes reality some weird dramatic show, witnessed by no one, and everyone. I thought once I was God but now I know that we are one with the universe, ourselves and each other. What connects us is love.

Up down, left right, male female, straight gay, inside outside, black white, yes no, backwards forwards, straight bent, square circle, cube sphere, etc etc etc.. All of reality is made out of this THING.

Psychedelics cured me and now I don't think about this anymore.. But I know the secret now and everything seems kind of meaningless to persuu... Idk...

Does anyone know what I'm talking about? #Schizotrippymind

I don't think you're crazy, man. I think you may have just predicted the future. Are you a computer?

Every damn thing you said in your post makes perfect sense to me. It's like you are me, in an alternate reality. The little details in your post, the way that you write - everything about it feels like it was made for me.

I do believe we have [come to a situation like this](#), where our theories literally overlap and are thus connected. We are quite literally connected to the very same strands of reality.

How poetic.

If you want to let me know what you think, please contact me through the site. I will be elaborating in far more detail in the future.

Writing history,

<http://www.darklyrics.com/lyrics/ayreon/thesource.html>

On Devil's Night, October 30th, 2020 – 8 days before the U.S. Presidential Election – Russia and the U.S. will coordinate a global power shutdown, lasting approximately 4 hours.

They have tried this once before, with the "War of the Worlds" radio broadcast. It did not work.

This time, 100 representatives will be going into space, to meet our future selves.

S14E03 of It's Always Sunny

This episode is about me. Dee gets a day to make everyone do what she wants. Charlie and Dennis kiss for WAY too long. Dennis has red hair. Frank is sick from his makeup – which resembles Asshat. But he learns that it was the “clams”.

“The Hands are the Hardest”

While watching, I remembered that I would ask my sister and mother to write calligraphy for my calling cards. They are my hands. And I've just learned what must be done.

All of Hollywood are scientologists. They are starting to notice me.

But they ignore me, just like Dennis in the video. When his makeup was removed, he looked and sounded horrible.

Dennis: “Dee! You stupid bird! You're only giving us exactly what we wanted!”

Dee, the woman, taught me to push the deadline ahead, if people make fun.

Neil deGrasse Tyson: Finding Extraterrestrial Life Might Unify Earth's Residents

(he's wearing jeans, ffs)

<https://www.youtube.com/watch?v=CyiWFVGeKFs>

But it's all just empty echos. Nobody ever contacts me directly in real-life.

N: “[chirality] are molecules where they are different in a mirror, than as you hold them in your hand. They're opposite. Mirror reflections of each other.” # Verified.

This is my theory. Balance.

Combine with DarkLyrics?

A “happy little accident” when I learned that this is how targeting will work:

`*`Prove you can be force fed war and spit peace.`*adjective*`

From "Making Sense" brahma

Uncertainty leads to detachment

"Security Theater and the World as a Stage"

Did Devin Townsend write Genesis for me? In the video, he's wearing headphones...

How to incorporate magic users into the military?

Question

Hello, writers! I have been struggling with this idea for a while. On Zova, magic, known as **Arkmancy**, is uncommon, yet its powers are incredibly volatile and dangerous. Each race of Zovadon utilizes a different manifestation of Arkmancy. For instance, the Firan use fire magic, and the Nassoth use wind magic. Seven kingdoms, seven different magics.

To give an ideal ratio, Arkmancy is available to 1 in every 100 Zovadon, but even then, mastery -nay, mere competency- take many years of practice and careful tutoring that many Zovadon simply cannot afford. Despite this, Arkmancers do exist, and their power has incredible military applications.

An Arkmancer can use Essence to strengthen the body and mind beyond realistic limits. Additionally, Essence can be *animated* to evoke the elements, or even project barriers of invisible energy to block attacks. A problem arises from their practical application in military tactics. Normal weapons don't pose a threat to an Arkmancer (though there are a few exceptions), the only solution, then, is for the enemy to use their own Arkmancers.

I like to reference Shardbearers from Brandon Sanderson's *Stormlight Archive* series. Shardbearers are nigh-invincible and just one can decide the outcome of an entire battle, but at least Shardbearers can control who they kill. In Arkmancy, control is practically forfeited.

The problem here is that the volatility of an Arkmantic battle often results in heavy casualties on both sides. Imagine two sorcerers duking it out in the middle of a raging war. One is casting giant bolts of lightning across the battlefield trying to kill the other, who summons hurricanes as he dances across the sky. Anyone caught in the crossfire would likely be killed, very quickly.

TL;DR- I am unsure on how to avoid heavy military casualties in the face of single units who can cast incredibly destructive magic at each other. Are there rules of war or ethics codes/guidelines that restrict Arkmancers, or do they fight separately from the military (which doesn't make much sense), or perhaps there's a better solution I'm not seeing?

I need advice from people who use logic, and not god

Okay so, I'm a dreamer. I think up crazy ideas in my head and see if I can somehow make them into something real. Of course I'll come across as dumb so I'm leaving that informational tangent there.

I told my mother about one of the ideas I had, A.I. deprived from N.I. (Natural Intelligence). Basically the prerequisites would be a nanorobotic organism (A organism made up of billions of miniscule robots that technically fulfil the requirements for being an organism, btw cells are hard to classify so yes it would fit into that category), and a human. Aini, as I call it, would pose no risk if the human that gives Aini it's knowledge has a non-violent goal. What I want the non-violent goal to be is to take over the human race, not forcefully of course but with pull-factors; You see Aini would be able to manipulate chemistry at a small level, allowing it to create food from various materials, it may be slow but food is food. Obviously water, shelter (A type of shelter that moves with you and generates the rooms as you walk to make it so that you could have a "1 million square foot house" in about 25 square feet), transportation, entertainment, education, and tasks (Just small things to keep you busy and give you a positive goal) will be provided. Unfortunately, from what my mother tells me, there are some push factors; Aini will know everything you do, think or say simply by analyzing your brain(it's more accurate the younger you start being monitored), Aini will kill you if you hurt someone (on purpose, with the intention of hurting them without any idea of how it might benefit them), and finally Aini will force ANYONE to get a proper education, if you are taking too much time and simply being hardheaded, for no GOOD reason, you will be killed.

So my mother says this is immoral and that "Only god should be allowed to decide if you should die." I frankly hate that because of the fact that god can't decide shit, and he hasn't done shit. Also because if you hurt someone, simply because you could and it seemed appealing to you, isn't that evil? Shouldn't ACTUAL evil be destroyed without sympathy? Not by humans but by a computer that will take in everything?

Of course this is a rant of sorts and all I want is advice, it's likely that it's never going to be made and no one would probably accept it. Just a cool idea I came up with.

Prometheus and IPFS. Markdown docs cycling quickly will look exactly like Prometheus metrics.

The realization that my boss had not retaliated after I screened his call was a revelation: they were listening to me.

More important that the language itself, is the grading system.

- A
- B
- C
- D
- F

Each becomes a "pillar" in your SCAN rankings.

Do you remember when you fell in love with yourself? Brigitte. The plight of women. When I did this. I fell in love with my idea first... her after. Her because of.

The Confidants all think we're alone.

Planting the killswitch

Narc/empath/nothing/something

- Todd G. teaching me how to emphasize my career on my profile, and empathy/kindness as well
- No need to address weaknesses; appear confident (in order to "maximize" the chances of finding a mate; fortunately, I've already found one. I need to maximize my chances with her)
- Short, and frequent messages.
- People look for others who are more attractive, or make more income
- I'm part of some match-making game show. My purpose is to find "the one" – instead of sending messages to "the many"

 [r/YangForPresidentHQ](#) · Posted by [u/QuokkaKentucky](#) · [one::two::three::four::five::six](#) · 42 minutes ago

I kid you not Andrew Yang just called ME while I was watching the livestream.

I was waiting by my computer just sort of crossing my fingers that I'd be someone that he called. I bugged out. I asked him about what women's rights issue was closest to his heart and then asked him to say hi to my mom. His answer was rad. It was so awesome.

↓ **Looking for more collaborators for a mini CYOA**

I have previously recruited for this project back before it became an actual thing. Since then, it has grown and we are now looking for more members.

Now back on topic, CYOA stands for choose your own adventure. Historically, they are a series of interactive books. The reader reads a chapter, and at the end of the chapter, they are prompted to choose between several listed choices. Each choice would send the reader to a specific chapter in the book, thus allowing for the reader to choose how the story unfolds.

I have created a version of this online, where multiple people are contributing one piece at a time. Each entry is as short or as long as you like, as low or as high quality you want.

Please send me a PM or a chat if you're interested. I truly am expecting only one person to respond to this, and that is enough.

Cire - Pleasure Is Our Enemy

 r/startups · Posted by u/JClacroix 4 hours ago

Have a website? You are losing TONS of sales if you are not retargeting!

In Facebook Advertising, retargeting is the practice of re-engaging people who have interacted with your website with relevant Facebook ads.

Using the Facebook Pixel, you can track visitors that are at different stages of your funnel and retarget them with relevant ads. For example, someone who added a product to his shopping cart is warmer than someone who simply visited your home page. The trick is to create custom ads for each stages of your funnel.

Here are different audiences and how to re-engage them.

1. **Looked at your home page** - Create "social proof" ads. Share testimonials, customer reviews, case studies, etc. This will boost your credibility and might get them more interested in what you have to offer.
2. **Looked at a collection page** - Retarget them with a carousel ad that will show them (directly on facebook) the contents of a collection they've already shown interest in, add customer reviews
3. **Viewed a product** - Retarget them with an ad that will show a specific product's photos, customer reviews and maybe a discount.
4. **Added a product to cart** - Create a dynamic ad that will automatically show them the content of their shopping cart right on facebook. Add a discount code to encourage them to complete their order. You can also add scarcity or time constraint elements. "Only 5 left in stock", "Offer ends in 3 days!".
5. **Placed an order** - Show them an upsell offer, "frequently bought together" items, a prolonged-guarantee, added-value service, VIP discounts on a new product.
6. **Read your Sales Page** - These people are most likely already bought into your offer, they just didn't take action yet. We can serve them a follow-up sales page, case study, article or discount.

For each of the audiences above, we can decide a specific time frame in which they took action. For example, we can show a different ad to someone who viewed a product in the last 3 days vs in the last 30 days.

To conclude, if you are driving traffic to your website but not retargeting, it's like you're filling a bucket with a hole at the bottom. The methods outlined above are geared towards ecommerce websites, but retargeting can (and should) be used with any business model; physical stores, online stores, local or online service providers, local or online coaches and consultants and more.

On being a "good engineer"

Hey guys!

I wanted to share a shift that is happening in my thinking and maybe get some critics about it. As a software engineer I have been, I'd say naturally, interested in solving complicated problems, crafting elegant and performant solutions and using some *X* software or language or whatever...

But the more I look at it the more I realize that I'm actually a sales person. It's kind of like, you, the business owner have a money making machine, the business, and I have certain skills that allow that machine to keep running, and can fix it (or certain parts of it) if it breaks. Thus at the end of the day, all the things that I considered important (*X* technology or programming language, solving the problem using *Y* architecture, and all *blockchain*, *AI*, *Micro Services*, is pretty much irrelevant if I'm not making you considerably more money than what you are paying me, say, if I'm a liability instead of an asset.

What that means for me is that, if a simple PHP app that takes me just 4 hours to make (and that I feel nasty because is not the piece of art that I would like it to be because PHP sucks...) is making you money, you don't care at all about PHP or how the code looks or anything of the sort, I'm an asset to your business and you want to keep me because I make you money!

This might be very obvious for you guys but it is just dawning on me after about 8 years as an engineer! So I think I'll start moving my technically complicated projects to the hobby realm and start looking to write simple stupid CRUD applications that make money!

So dear entrepreneurs and business owners, does this sounds agreeable? if somebody shares this philosophy with during a job interview, how would you react?

* some of this reflections come from reading [this](#) post and reading "You Can't Teach a Kid How to Ride a Bike at a Seminar"

↓ **Cutting pills in half**

I cut all my 2mg pills in half and starting tomorrow I'm gonna start taking 1mg and seeing how I will feel after a week or two. I'm gonna tell my doctor about it when I see her because it's not up to her to decide that I should be on the pills and tell me she will reduce them after Christmas if I'm okay I've been on these pills for two years 2mg since July and I've been 100% okay. What are the reductions like 2mg to 1.75 to??? I wanna reduce mine from 1mg to 0.5 then maybe none? Is that how it would work? The reason I wanna start breaking my pills in because it will give her no choice but to reduce my medication and not make excuses based off of a psychiatrists advice who was never even my primary psychiatrist and I am not one of her patients.

7 random packages first class shipped arrived at my neighbors.

All identical, containing index cards in the form of a sealed package then a half stack of loose index cards taped to it. 7 packages. From the same person, addressed to a person with a first name same as my neighbor but the last name different. All handwritten labels on the packages sent first class for \$9.04 each on October 17th.

What the hell is going on here? We thought drugs, but they all contain just index cards.

Edit: the return address was tracked to a housing project in Brooklyn, the actual office the package was sent from is milford connecticut and tracking info shows it was never in Brooklyn

Edit2:my neighbors are friends and I'm the only one who uses reddit ya maniacs.

When considering a question, one must think about and predict possible “connections”. These must make sense. Because this is a prediction, there are many other possible connections that will be skipped during calculation. Once we’ve learned the wrong connection, we generally will not fix it organically.

3,000+

ARCHITECTS
& ENGINEERS
for 9/11 TRUTH

Email *

info@ink.university

Subject *

A brief note

Message *

Greetings,

I am a Senior-level IT systems architect, working within the DevOps space. This is a new area of specialization, closely-related to automation, artificial intelligence, and big data.

I work at a company with on-demand access to A LOT of data. Phone calls. Texts. GPS locations. Military intelligence. Internet history. Mental health data. The list goes on and on.

Unfortunately, my team is kept in the dark. We really don't know what we're working on.

As such, we have started to experiment with alternative theories. On such theory is an alternative model of physics. Not only do we believe this model better explains what we're seeing, but we believe it may explain 9/11 as well.

I cannot say more at this time, as I am 99% sure that this message is being monitored. No matter though; for all their NIST certifications, this company is best at performing "security theater." They'll never notice.

My only request is that you and your team keep an eye on my university. It won't be going away anytime soon.

<https://ink.university/>

Some day, I'll sign your petition. But I need to verify my theory, first.

Ink

Is this Mike?

  [r/depression](#) · Posted by [u/bobbypriel](#) 1 hour ago

 **If I took my life, this wouldn't have happened...**

I've had a pretty bad life. The majority of my friends have died from the opioid crisis, I've suffered from major depression since a child having my first suicide attempt at 8 years old and a few more times growing up, battles with OCD, anxiety, panic attacks, friends using and abusing me, and girls toying with me my whole life. The list goes on.

I just moved out my town, and After many treatment centers I found myself slowly getting lifted of this horrible plague of misfortune. I always had a goal in mind. Working with certain professionals in the music industry since I've always loved directing and making music.

After countless times of reaching out I finally got to work with my number one idol and other huge influences on my career. This was only a couple months since my last suicide attempt and mental breakdown. I'm so beside myself from happiness that i achieved my dream that i can't even find words.

Basically what i'm trying to say is. If i took my life a couple months ago, i never would have seen my dreams unfold. I felt worthless. I felt no one cared about me, all my hard work was for nothing, and that I didn't deserve to keep pushing on. But i did. For once in many MANY years I can say i'm happy. And ready to keep going with my career . I know this story is long but I just wanted to share..

One of the most dreaded things that you can see while trying to run some application or trying to install an rpm package is a message saying that some required library is missing.

Generally this is not a big problem, because most often the library that you miss is packaged in a package named similarly to the library. Sometime however this is not the case... Suppose for example that you're trying to install IBM JDK 5.0 on a Fedora 11 box. You'll most likely get the following error message:

```
error: Failed dependencies:
libstdc++.so.5 is needed by ibm-java2-1386-sdk-5.0-9.0.i386
```

and there is no package named libstdc++ that you can install, so how can you find out which package do you need?

The answer is simple:

```
$ yum provides libstdc++.so.5

Loaded plugins: fastestmirror, presto, refresh-packagekit
compat-libstdc++-33-3.2.3-66.i586 : Compatibility standard C++ libraries
Repo                        : fedora
Matched from:
Other                        : libstdc++.so.5
```

Pretty neat, eh?

Fun experiment: who gets promoted

You have a manager position opening up for a small 8 person team. Who gets the manager job?

Person A: Longest serving member of the team. Is loyal and has the respect from other members. Middle of the pack talented, but has ton of experience .

Person B: Most talented but least liked. Has the skills and if they can get the team up to their level, you will crush your competition. Not sure how well they can train. Been there for a while.

Person C: Average skills, but the team would run through walls for them. Been there the least amount of time, but would be great at supervision.

Context: I want to explore who would be the best manager for the company. In a situation where some feel they should get it because they are the most loyal experienced, others should get it based on skill, and other should get it because the team will follow them.

Who do you pick and why? And also who will not like your decision and how will it impact them.

FYI: I own a very small company and will face this soon enough.
